

Učni načrti

Univerzitetni študijski program prve stopnje **VODARSTVO IN OKOLJSKO INŽENIRSTVO (UN)**

Course Syllabi

1st Cycle Academic Study

**WATER SCIENCE AND
ENVIRONMENTAL ENGINEERING (BA)**

Velja od 2024/2025 | Valid from 2024/2025

Veljavni študijski program na dan 10.1.2024 | Valid study programme at January 10, 2024

KAZALO / TABLE OF CONTENTS

1. LETNIK / 1ST YEAR

Matematika I / Mathematics I	3
Fizika / Physics.....	6
Osnove ekologije celinskih voda / Fundamentals of freshwater ecology	9
Uvod v okoljsko inženirstvo /Introduction to Environmental Engineering	12
Matematika II / Mathematics II	16
Osnove kemije / Basic chemistry	20
Geodezija / Geodetic engineering.....	23
Hidrologija / Hydrology	26
Gradiva / Construction and Building Materials.....	30
Digitalno načrtovanje in programiranje / Digital Design and Programming.....	34

2. LETNIK / 2ND YEAR

Hidromehanika / Hydromechanics	37
Osnove mehanike / Introduction to Structural Mechanics.....	41
Matematika III / Mathematics III	45
Gospodarjenje s sekundarnimi in odpadnimi snovmi / Secondary and Waste Materials Management.....	48
Osnove zdravstvene hidrotehnike / Introduction to Sanitary Engineering	52
Hidraulika / Hydraulics	55
Mehanika tal in inženirska geologija / Soil Mechanics and Engineering Geology.....	59
Komunalne naprave / Communal Technical Infrastructure.....	63
Osnove jeklenih konstrukcij / fundamentals steel Structures	66
Organizacija gradbenih del in poslovanje / Organization of Construction Works and Operation	70

3. LETNIK / 3RD YEAR

Ceste in promet / Roads and Traffic	73
Geotehnika / Geotechnical Engineering	76
Temelji prostorskega načrtovanja / Fundamentals of Spatial Planning.....	79
Osnove potresnega inženirstva / Fundamentals of earthquake engineering.....	83
Osnove lesenih konstrukcij / Introduction to Timber Structures.....	87
Vodne gradnje / Introduction to Drainage Engineering.....	91
Osnove betonskih in zidanih konstrukcij / Introduction to concrete and masonry Structures	94
Praktično usposabljanje / Practical Training	98
Diplomsko delo / Diploma Work.....	101

STROKOVNI IZBIRNI PREDMETI / PROFESSIONAL ELECTIVE COURSES

Osnove statistike v vodarstvu / Basic Statistics in Water Science.....	104
Napredne statistične metode v vodarstvu / Advanced Statistical Methods in Water Science.....	108
Gradbene tehnologije v vodarstvu / Construction Technologies in Water Works	111
Operacijske raziskave v gradbeništvu / Operational Research in Civil Engineering.....	114
Hidroinformatika / Hydroinformatics	117
Meritve v hidrologiji / Hydrometry	121
Naravne nesreče in njihov vpliv na okolje, prostor in družbo / Natural Disasters and their Impact on Environment and Society	125
Uporabna ekologija in ekotoksikologija / Applied Ecology and Ecotoxicology	130
Uvod v okoljske tehnologije / Introduction to Environmental Technologies.....	133
Temelji ekonomske analize / Introduction to Economic Analysis.....	136
Napredne metode ekonomske analize / Advanced Methods of Economic Analysis	140

UČNI NAČRT PREDMETA/COURSE SYLLABUS

Predmet:	MATEMATIKA I
Course title:	MATHEMATICS I

Študijski programi in stopnja	Študijska smer	Letnik	Semestri
Vodarstvo in okoljsko inženirstvo, prva stopnja, univerzitetni	Ni členitve (študijski program)	1. letnik	Zimski

-----------------------------------	--------------------------------------

Vrsta predmeta/Course type:	Obvezni splošni /Obligatory general
------------------------------------	-------------------------------------

Jeziki/Languages:	Predavanja/Lectures:	Slovenščina
	Vaje/Tutorial:	Slovenščina

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:	Prerequisites:

Vsebina:	Content (Syllabus outline):
Množice in preslikave: operacije z množicami, definicijsko območje, zaloga vrednosti, enakost preslikav, kompozitum, graf, injektivnost, surjektivnost, bijektivnost, inverzna preslikava. Naravna, realna in kompleksna števila: princip popolne indukcije, natančna spodnja in natančna zgornja meja (<i>inf</i> in <i>sup</i>), absolutna vrednost, kompleksna števila: geometrijska predstavitev, računske operacije, polarni zapis, de Moivreova formula, osnovni izrek algebре. Geometrijski vektorji: vsota, produkt s skalarjem, linearna kombinacija, linearna neodvisnost, baza, skalarni produkt, vektorski produkt, mešani produkt, analitična	Sets and mappings: operations with sets, domain, range, equality of maps, composition, graph, injectivity, surjectivity, bijectivity, inverse map. Natural, real and complex numbers: induction principle, exact upper and lower bound (<i>inf</i> and <i>sup</i>), absolute value, complex numbers: geometric representation, operations, polar form, de Moivre formula, fundamental theorem of algebra. Geometric vectors: sum, product with scalars, linear combination, linear independence, basis, scalar product, vector product, mixed product, analytic geometry. Numerical sequences and series: boundedness and convergence, Cauchy criterium,

<p>geometrija v prostoru. Številska zaporedja in vrste: omejenost in konvergenca, Cauchyjev kriterij, limita, računska pravila, konvergenca številske vrste, geometrijska in harmonična vrsta, konvergenčni kriteriji. Limita in zveznost funkcije realne spremenljivke: limita funkcije v dani točki, računska pravila, posplošene limite, asymptote, zveznost funkcije, lastnosti zveznih funkcij na zaprtem omejenem intervalu. Odvedljivost funkcije realne spremenljivke: definicija odvoda, tangenta na graf funkcije, računska pravila, Rolleov in Lagrangeov izrek, stacionarne točke in lokalni ekstremi, globalni ekstrem na zaprtem intervalu, IHospitalovo pravilo, višji odvodi, Taylorjeva formula, diferencial, konkavnost, konveksnost, prevoj, risanje grafov funkcije. Matrike: matrične operacije, inverzna matrika, matrični zapis sistema linearnih enačb, struktura rešitev, Gaussova metoda eliminacije, matrične enačbe, determinante, lastne vrednosti in lastni vektorji, karakteristični polinom, diagonalizacija. Integral funkcije realne spremenljivke: določen integral, Riemannova vsota, integrabilnost, lastnosti, Newton-Leibnizov izrek, primitivna funkcija, nedoločen integral, uvedba nove spremenljivke, integracija po delih (per partes), posplošeni (izlimitirani) integral, uporaba določenega integrala. Potenčne vrste: konvergenčni polmer, odvajanje, integriranje.</p>	<p>limit, computation rules, convergence of a series, geometric and harmonic series, convergence criteria. Limit and continuity of functions of one real variable: limit of a function at a given point, computation rules, generalized limits, asymptotae, continuity of a function, properties of continuous functions on closed bounded interval. Derivative of functions of one real variable: definition, tangent on a graph of a function, computation rules, theorem of Rolle and Lagrange, stationary points and local extrema, global extremum on a closed interval, l'Hospital rule, higher derivatives, Taylor formula, differential, concavity, convexity, inflection point, plotting graphs. Matrices: matrix operations, inverse matrix, matrix form of a system of linear equations, structure of solutions, Gauss elimination method, matrix equations, determinant, eigenvalues and eigenvectors, characteristic polynomial, diagonalization. Integral of functions of one real variable: definite integral, Riemannian sum, integrability, properties, Newton-Leibniz formula, primitive function, indefinite integral, substitution, integration by parts (per partes), application of definite integral. Power series: convergence radius, derivation, integration.</p>

- Sorokin, Y. 1999. Aquatic Microbial Ecology. Backhuys Publ., Leiden, 248 str.

Cilji in kompetence:**Cilji**

- Podajanje osnovnih naravoslovnih znanj, na katerih grade strokovni predmeti,
 - obvladovanje osnov biologije z ekologijo.
- Pridobljene kompetence
- Znati kritično presojati podatke okoljskih analiz in meritev,
 - zнати сodelovati pri reševanju konkretnih ekoloških problemov v okolju,
 - razviti ekološko in okoljsko razmišljanje o inženirskih problemih in posegih v okolje.

Objectives and competences:**Objectives**

- To deliver basic environmental knowledge, which provides adequate foundations for subsequent classes,
 - to manage basics of biology and ecology.
- Gained competences
- To be able to critically assess environmental data,
 - to be able to participate in solving ecological problems in the environment,
 - to develop ecological and environmental reflections on engineering problems and interventions in the environment.

Predvideni študijski rezultati:

- Poznavanje in razumevanje osnovnih znanj iz biologije, mikrobiologije in ekologije,
- uporaba ekoloških zakonitosti pri reševanju okoljskih problemov,
- razumevanje metod vrednotenja okolja,
- sposobnost kritične presoje podatkov dobljenih pri okoljskih raziskavah,
- sposobnost sklepanja od splošnega ekološkega k posebnemu in obratno,
- spretnost uporabe in razumevanje okoljske literature.

Intended learning outcomes:

- Knowledge and understanding of basics in biology, microbiology and ecology,
- the use of ecological principles in solving environmental problems,
- understanding the methods of environmental evaluation,
- the ability for critical analysis of data obtained in environmental studies,
- the ability of reaching conclusions from the general to the specific and vice versa,
- the ability to use and understand environmental literature.

Metode poučevanja in učenja:

Predavanja, delo v laboratoriju in terensko delo.

Learning and teaching methods:

Lectures, laboratory work and field work.

Načini ocenjevanja:**Delež/Weight Assessment:**

Vsebina:	Content (Syllabus outline):
Okoljsko inženirstvo združuje številne discipline, ki so potrebne, da gospodarno in dolgoročno zagotavljamo zdravo bivalno in naravno okolje za ljudi in vsa živa bitja na planetu, izkoriščamo obnovljiva naravna bogastva in energijo, skrbimo za zmanjševanje negativnega človeškega vpliva na okolje in povečevanje pozitivnih vplivov, zagotavljanje javnega zdravja itd. Predmet Uvod v okoljsko inženirstvo podaja uvid v to kompleksno povezanost disciplin in na primerih pojasnjuje inženirske metode, s katerimi analiziramo in predvidimo delovanje okoljskih procesov.	Environmental Engineering brings together many disciplines in order to: ensure healthy living and natural conditions for people and all living creatures on our planet, use renewable natural resources in efficient and sustainable way, minimize negative and maximize positive human environmental impacts, ensure public health... Introduction to Environmental Engineering gives an overview to this complex interconnection of disciplines and uses practical examples to explain engineering methods for analyzing and predicting environmental processes. Lectures are composed from the

Predavanja so sestavljena iz naslednjih osnovnih poglavij: predstavitev predmeta, poslanstvo, zgodovina, povezava na trenutne probleme; postavitev masnih bilanc; postavitev energetskih bilanc; osnove bio-geo-kemije: kroženja ključnih elementov; osnove kemijske kinetike; populacijska dinamika; voda, zemlja, zrak, biota; modeli transporta in usode onesnažil; analiza tveganja; analiza življenjskega cikla; presoja vplivov na okolje. Pridobljena znanja bodo študentu pomagala premostiti pot od teoretičnih k praktičnim predmetom. Praktični primeri pri vajah bodo zasnovani tako, da bo študent lahko predvidel in razumel možne rezultate in tako laže razumel teoretično ozadje.	following main topics: introduction, mission, history, connection to present day environmental problems; mass balances; energy balances; basics of bio-geo-chemistry: basic elements' cycles; basics of chemistry kinetics; population dynamics; water, soil, air, biota; transport models and fate of pollutants; risk analysis; life cycle analysis; environmental impact assessment. Acquired knowledge will help students to overcome the gap between theoretical and practical subjects. Practical exercises will be designed in a way that students can predict and understand possible outcomes and facilitate the understanding of theoretical background.

- Učno gradivo v spletni učilnici UL FGG.

Cilji in kompetence:**Cilji**

- Spoznanje področja delovanja okoljskega inženirja in metodologij dela,
- evidenca in analiza okoljskih problemov,
- izbira možnih inženirskih ukrepov,
- snovna, energetska in ekonomska analiza,
- presoja vplivov na okolje,
- analiza življenjskega cikla,
- izdelava predloga optimalne rešitve.

Pridobljene kompetence

- Prepozнатi okoljske problem,
- definirati nabor možnih inženirskih rešitev,
- izdelati potrebne analize in presoje ukrepov,
- predlagati / zagovarjati optimalno rešitev.

Objectives and competences:**Objectives**

- Introducing the field of environmental engineering as well as working methods,
- analysis of environmental problems,
- list of engineering measures,
- material, energy and economic analysis,
- environmental impact assessment,
- life cycle analysis,
- elaboration of optimal environmental solution.

Gained competences

- Recognizing environmental problems,
- defining a list of viable engineering solutions,
- elaborating analysis and assessing measures,
- suggesting / arguing optimal solutions.

Predvideni študijski rezultati:

- Pridobiti osnovna znanja in spretnosti za prepoznavanje in reševanje okoljskih problemov.

Intended learning outcomes:

- To gain basic knowledge and skills for recognising and solving environmental problems.

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:	Prerequisites:
Opravljen izpit iz Matematike I oz. drugega predmeta s primerljivo vsebino.	Passed exam in Mathematics I or other courses with comparable content.

Vsebina:	Content (Syllabus outline):
Skalarne funkcije več realnih spremenljivk: metrika prostora R^n , definicijsko območje, graf, nivojnice, limita in zveznost funkcije več realnih spremenljivk, odvod v dani smeri, parcialni odvodi, gradient, stacionarne točke, vezani ekstremi, globalni ekstremi, višji parcialni odvodi, Taylorjeva formula, Jacobijeva matrika za vektorsko funkcijo vektorskega argumenta, verižno pravilo. Dvojni in trojni integral: Riemannova integralska vsota, integrabilnost, lastnosti, prevedba dvojnega (trojnega) integrala na dvakratni (trikratni) integral, uvedba novih	Scalar functions of several real variables: metrics of the space R^n , domain, graph, isohипses, limit and continuity of a multivariate real function, directional derivative, partial derivative, gradient, stationary points, constrained extrema, global extrema, higher partial derivatives, Taylor formula, Jacobi matrix for vector function of a vector argument, chain rule. Double and triple integral: Riemannian sum, integrability, properties, transformation of double (triple) integral to twice (three times) univariate integral, substitution (polar, cylindric, spheric

<p>spremenljivk (polarne, cilindrske, sferne koordinate). Integrali s parametrom: integriranje, odvajanje, funkciji gama in beta. Diferencialna geometrija: pot, krivulja, parametrizacija, dolžina krivulje, naravni parameter, osnovni trieder, fleksija, torzija, krivinski polmer, Frenet-Serrejeve formule, gladka elementarna ploskev, parametrizacija, tangentna ravnina, površina. Krivuljni integral: krivuljni integral 1. vrste skalarnega polja po krivulji, orientacija krivulje, krivuljni integral 2. vrste vektorskega polja po orientirani krivulji, Greenova formula. Ploskovni integral: ploskovni integral 1. vrste skalarnega polja po ploskvi, orientacija ploskve, ploskovni integrala 2. vrste vektorskega polja po orientirani ploskvi. Integralski izreki: diferencialni operatorji: grad, div, rot, Gaussov in Stokesov izrek, gradientnost (potencialnost, konzervativnost) vektorskega polja. Navadne diferencialne enačbe: rešitev, DE prvega reda (ločljive spremenljivke, homogena, linearna), začetni problem, linearna DE n-tega reda s konstantnimi koeficienti.</p>	<p>coordinates). Integrals with parameter: integration, derivation, functions gamma and beta. Differential geometry: path, curve, parameterization, curve length, natural parameter, basic trihedron, inflection, torsion, curvature radius, Frenet-Serre formulae, smooth elementary surface, parameterization, tangent plane, area. Line integral: line integral of a scalar field along a curve, curve orientation, line integral of a vector field along an oriented curve, Green formula. Surface integral: surface integral of a scalar field on a surface, surface orientation, surface integral of order 2. of a vector field on an oriented surface. Integral theorems: differential operators: grad, div, rot, theorems of Gauss and Stokes, gradient (potential, conservative) vector fields. Ordinary differential equations: solution, ODE of first order (separate variables, homogenous, linear), initial problem, linear ODE of order n with constant coefficients.</p>

Witte, B., Schmidt, H. 2006. Vermessungskunde und Grundlagen der Statistik für das Bauwesen. Heidelberg, Herbert Wichmann Verlag.

Kogoj, D. 2013. Geodezija za gradbenike in vodarje, Ljubljana, UL FGG.

Učna gradiva v spletni učilnici.

Cilji in kompetence:**Cilji**

- Študenti se seznanijo z osnovnimi geodetskimi metodami izmere in geodetskimi proizvodi s poudarkom na praktičnih primerih uporabe geodezije v gradbeništvu in možnostmi sodelovanja z geodeti, za naročanje in prevzemanje geodetskih produktov.

Pridobljene kompetence

- Poznavanje in razumevanje osnovnega izrazoslovja s področja geodezije, poznavanje nalog in družbene pomembnosti geodezije, obvladovanje praktičnih primerov uporabe geodezije v gradbeništvu.

Objectives and competences:**Objectives**

- Students are acquainted with basic geodetic surveying methods and geodetic products with the main stress on the practical examples on application in geodetic engineering – planning, design, construction and the possibilities of cooperation with geodetic experts, to order and to accept geodetic products.

Gained competences

- Skills and understanding of basic geodetic terminology, knowledge about social importance of geodesy in society, to master practical use of geodetic services in civil engineering.

Predvideni študijski rezultati:

- Poznavanje geodezije kot vede in stroke, njenih področij, nalog in družbene pomembnosti.
- Razumevanje osnovnih geodetskih postopkov meritev in obdelave merskih vrednosti s poudarkom na razumevanju rezultatov

Intended learning outcomes:

- Skills on geodesy and surveying as science and profession, its field of work, geodetic tasks and importance for modern society.
- Understanding of basic geodetic measurements and computations with the main stress on

<p>geodetskih meritev in načini interpretacije le teh.</p> <ul style="list-style-type: none"> Seznanitev s celotnim spektrom geodetskih proizvodov in razumevanje njihove uporabnosti v vodarstvu in okoljskem inženirstvu. Pridobljeno znanje je uporabno v smislu racionalne uporabe geodezije tako s stališča investitorja kot s stališča izvajalca, predvsem v smislu zagotavljanja visoke kvalitete opravljenih del. Razumevanje geodetskih postopkov in izdelkov omogoča kritično presojo kvalitete ter objektivno ovrednotenje skladnosti teoretičnih načel in praktičnega ravnanja. 	<p>understanding the results of geodetic measurements and their interpretation.</p> <ul style="list-style-type: none"> Getting acquainted with the whole spectrum of geodetic products and understanding of their applicability in water management and environmental engineering. Acquired knowledge is useful for rational use of geodetic products from the investors' points of view and in the process of project realization. Special stress is on the understanding of geodetic products which give an opportunity for critical view (judgment) of their quality and objective valuation of accordance between theoretical principles and practical proceedings.
--	--

Metode poučevanja in učenja:

Predavanja: prosojnice, grafične prezentacije, demonstracije, praktični primeri.

Laboratorijske vaje: računalniška učilnica, uporaba terestričnih geodetskih instrumentov pri terenski izmeri.

Konzultacije, spletna učilnica, internet.

Learning and teaching methods:

Lectures: slides, graphical presentations, demonstrations, practical examples.

Practical exercises: computer classroom, use of terrestrial geodetic instruments (total stations, GPS, levels) in field use.

Consultations, E-classroom, internet.

Načini ocenjevanja:**Delež/Weight Assessment:**

Vaje	50,00 %	Tutorial
Izpiti	50,00 %	Examination

Učna gradiva v spletni učilnici.

Cilji in kompetence:**Cilji**

- Seznanitev z osnovami hidrologije, hidrometrije in uporabo analitičnih metod v hidrologiji,
- pridobitev poglobljenega znanja o posameznih komponentah hidrološkega kroga in njihovim merjenjem s poudarkom na hidrometriji.

Objectives and competences:**Objectives**

- To learn about the basics of hydrology, hydrometry and the use of the analytical methods in hydrology,

Pridobljene kompetence	<ul style="list-style-type: none"> • Pridobitev spretnosti zbiranja, interpretacije in obdelave podatkov ter osnovne spretnosti terenskega dela in ravnanja z merilnimi instrumenti, • z znanjem o kakovosti merjenih podatkov in njihovi interpretaciji zna uporabljati hidrološke podatke pri inženirskem odločanju in dimenzioniranju objektov. 	<ul style="list-style-type: none"> • to get a thorough knowledge about the components of the hydrological cycle and their measurement with a focus on hydrometry. <p>Gained competences</p> <ul style="list-style-type: none"> • To get skills of collecting, interpreting and analyzing the data and the basic skills of the field work and handling with measuring instruments, • with the knowledge of the quality of the measured data and their interpretation student uses hydrological data for engineering decision-making and designing the structures.
-------------------------------	--	---

Predvideni študijski rezultati:**Intended learning outcomes:**

<ul style="list-style-type: none"> • Študent pridobi znanje o zakonitostih gibanja vode v hidrološkem krogu, • študent spozna pomembnost hidroloških podatkov in njihovo uporabo pri analizi in vodarskem odločanju, • razumevanje pomena podatkov pri izvajanju analiz ter spoznanje celovitosti in kompleksnosti procesov v okolju, • spretnosti zbiranja, interpretiranja in obdelave podatkov, • uporaba računalniških orodij za izdelavo tabel, grafov ter osnovnih statističnih izračunov (npr. Excel), uporaba IKT, • spretnost uporabe domače in tuje literature ter drugih virov, poznavanje strokovnih izrazov, • uporaba različnih statističnih metod, identifikacija in reševanje problemov, kritična analiza, sinteza, • poročanje (ustno in pisno). 	<ul style="list-style-type: none"> • Student gains knowledge about principles of the water movement in the hydrological cycle, • student learns about the importance of the hydrological data and their application in analysis and decision-making in water management, • understanding the importance of the data in analyses and getting the knowledge of the integrity and complexity of processes in the environment, • skills of collecting, interpreting and processing of the data, • the use of software for creating tables, graphs and basic statistical calculations (e.g. Excel), use of ICT, • skills in using national and world literature and other sources, knowledge of professional terms, • the use of different statistical methods, identification and problem solving, critical analysis, synthesis, • reporting (oral and written).

Temeljna literatura in viri/Readings:

Žarnić, R. 2005. Osnove gradiv. Ljubljana, UL FGG.

Žarnić, R., Bokan-Bosiljkov, V., Bosiljkov, V. 2016. Gradiva – vaje. Ljubljana, UL FGG.

Taylor, G.D. 2000. Materials in Construction: An Introduction, 3rd edition. Pearson Education Limited.

Cilji in kompetence:

- Obvladanje znanja o tehničnih lastnostih gradiv in njihovi ekonomični uporabi ter ponovni uporabi ali recikliraju,
- spoznavanje metod projektiranja gradiv (beton, malte, kompoziti),
- usposobitev za preverjanje lastnosti gradiv in klasifikacije kakovosti s pomočjo standardnih metod laboratorijskih in terenskih preiskav.

Objectives and competences:

- To manage knowledge about the technical properties of construction and building materials and their economical use and about re-use or recycling of the materials,
- to know methods to design mortar, concrete or composite materials,
- to be trained to check the properties of construction and building materials and for their classification by using laboratory and in-situ test methods.

Predvideni študijski rezultati:

- Klasifikacija gradiv; osnove standardizacije in zakonodaje; surovinska sestava gradiv; tehnološki postopki proizvodnje gradiv; vrste izdelkov pri posameznem gradivu; mehanske, fizikalne in tehnološke lastnosti; uporabnost gradiv, vzroki in posledice propadanja gradiv; osnove standardnih metod preiskav gradiv.
- Razumevanje relacij med posameznimi lastnostmi gradiv (na primer: trdnost – poroznost; trdnost – način obremenitve (tlak, nateg, strig); prostorninska masa – poroznost; vpijanje vode – obstojnost); razumevanje vpliva osnovnih komponent kompozitnih materialov, velikosti njihovih delcev ter prostorninskih deležev na mehanske, fizikalne in tehnološke lastnosti kompozita; razumevanje postopkov projektiranja posameznih gradiv in načinov analiziranja doseženih lastnosti določenih z eksperimentalnim preskušanjem.

Intended learning outcomes:

- Classification of materials; the basics of standardization and legislation; composition of materials; technological processes for the production of materials; products made of particular material; mechanical, physical and technological characteristics; application of construction and building materials, causes and consequences of decay of materials; the basics of standard test methods of construction and building materials.
- Understanding of relationships between the individual properties of construction and building materials (for example: strength - porosity, strength - direction of load (pressure, tension, shear); density - porosity, water absorption - durability); understanding the influence of the basic components of composite materials, the size of the particles and the volume fractions on the mechanical, physical and technological properties of the composite;

<ul style="list-style-type: none"> Pridobljeno znanje omogoča reševanje manj zahtevnih problemov v praksi in je ustrezno izhodišče za poglobljeno spoznavanje posameznih gradbenih materialov s pomočjo obsežne literature in primerov iz prakse. Študentje so sposobni izvesti preproste preiskave gradbenih materialov in rezultate ovrednotiti. Predmet pokriva nabor osnovnih znanj na področju gradbeništva, ki so izhodišče za razumevanje in obvladovanje učne snovi v nadalnjem študiju. Študentje pridobijo spremnost uporabe standardov s področja gradbenih materialov. V okviru laboratorijskih vaj se spoznajo s timskim delom, analiziranjem lastnosti gradbenih materialov ter njihovim klasificiranjem. 	<p>understanding of the design processes of specific materials and methods for the evaluation of selected characteristics obtained by testing.</p> <ul style="list-style-type: none"> Acquired knowledge enables solving of less complex problems in practice and is an appropriate starting point for an in-depth understanding of individual construction and building material, with the help of extensive literature and case studies. Students are able to carry out simple tests of construction and building materials and evaluate obtained results. The subject covers a range of basic skills in the construction sector, which are platform for understanding and mastering the knowledge provided by courses in continuation of the study process. Students acquire skills in using the standards in the field of construction and building materials. In the framework of laboratory tutorials the students are acquainted with teamwork and analysis of the properties of construction and building materials and their classification.
---	---

Metode poučevanja in učenja:**Learning and teaching methods:**

<p>Osnovni del snovi se podaja v obliki predavanj na osnovi izbranih vsebin iz učbenika nosilca predmeta. Predavanjem sledijo laboratorijske vaje v skupinah po 15 študentov v laboratoriju FGG. Pri tem se uporablja posebej pripravljena literatura v obliki delovnega zvezka. V okviru vaj se podajo tudi preprostejši računski zgledi in naloge s področja vrednotenja lastnosti gradiv in njihovega projektiranja.</p>	<p>The main part of the course is provided in the form of lectures based on the selected content of textbook, prepared by the lecturer. Lectures are followed by laboratory exercises/tutorial, in groups of 15 students in the UL FGG laboratory. Students use log book specially prepared for the laboratory work. Within tutorial also simple calculations are carried out, along with exercises about evaluation of properties of materials and their design.</p>

Učno gradivo v spletni učilnici UL FGG.

Cilji in kompetence:**Cilji**

- Naučiti študenta podati in uporabljati CAD inženirske geometrijske podatke v 2D in 3D,
- naučiti študenta avtomatizirati obdelavo,
- naučiti študenta osnov programiranja.

Pridobljene kompetence

- Samostojna uporaba in razumevanje delovanja programov za računalniško grafiko (2D in 3D),
- izvajati osnovne matematične operacije s pomočjo računalniškim programom,
- sposobnost reševanja problemov in ponovljivih operacij z računalniškimi algoritmi.

Objectives and competences:**Goals**

- To learn how to describe and use CAD related engineering geometry in 2D and 3D,
- to be able to automate processing of large data sets,
- to learn the basics of programming.

Gained competences

- To independently use and understand software packages for computer graphics (2D and 3D),
- to execute basic mathematical procedures and processing using self-created computer programs,

	<ul style="list-style-type: none"> • to be able to solve computer based problems and reproducible operation with computer algorithms.

Cilji in kompetence:

<p>Cilji</p> <ul style="list-style-type: none"> Študent dobi osnovno znanje mehanike tekočin, ki mu omogoča reševanje mnogih problemov gradbene prakse, študent se nauči splošnega načina reševanja inženirskih tehničnih problemov - od zbiranja podatkov, izbire ustreznih enačb, presoje njihove točnosti itd. do verifikacije rezultatov, s pomočjo teoretičnih in laboratorijskih vaj ter terenskih ogledov študentje utrdijo pridobljeno teoretično znanje in spoznajo njegovo uporabnost za reševanje praktičnih problemov. <p>Pridobljene kompetence</p> <ul style="list-style-type: none"> Študent zna uporabljati poenostavljene enačbe mehanike tekočin, ki izhajajo iz splošnih enačb v prostoru ter razume, da so poenostavljene enačbe le njihovi posebni primeri. Študent zna uporabljati osnovne enačbe hidrostatike za določanje tlakov, sil in njihovih prijemališč na ravne in krive ploskve.
--

Objectives and competences:

<p>Objectives</p> <ul style="list-style-type: none"> Student gets basic knowledge about fluid mechanics which enables him to solve numerous problems from civil engineering practice, Student learns the general way of solving engineering technical problems – from collecting data, choosing adequate equations, assessment of their accuracy, etc., to verification of results, With the help of theoretical and laboratory tutorials as well as with field work students consolidate the acquired theoretical knowledge and recognize its applicability to solve practical problems. <p>Gained competences</p> <ul style="list-style-type: none"> Student knows how to use simplified equations of fluid mechanics arising from general equations in space and understands that simplified equations are only special cases.

<ul style="list-style-type: none"> • Študent razume teorijo potencialnega toka za določanje toka podtalnice in rešuje enostavne probleme. • Študent zna uporabiti Bernoullijevo oz. energijsko enačbo za določanje toka idealne nestisljive tekočine v cevovodih. Študent za realne tekočine razume principe laminarnega in turbulentnega toka ter modelne podobnosti; zna praktično uporabiti enačbo za račun upora teles v toku. 	<ul style="list-style-type: none"> • Student knows how to use basic equations of hydrostatics to determine pressures, forces and their points of application on flat and curved planes. • Student understands the theory of potential flow to determine groundwater flow and can solve simple problems. • Student knows how to use Bernoulli or energy equation to determine the flow of ideal incompressible fluid in pipes. For real fluids student understands the principles of laminar and turbulent flow as well as model similarity; he is able to use the equation of fluid drag for practical purposes.
--	---

Predvideni študijski rezultati:

- Študent razume lastnosti in razvrstitev tekočin ter njihove posebnosti v primerjavi s trdnimi snovmi.
- Študent pozna osnovne principe izpeljave osnovnih enačb: kontinuitetne (princip ohranitve mase), dinamične (princip ravnovesja sil) in enačbe stanja.
- Poenostavljeni enačbe študent zna uporabiti za praktične probleme določanja sil in prijemališč zaradi hidrostatsičnega pritiska na zapornice, pregrade in nasipe.
- S pomočjo teorije potencialnega toka študent zna preračunati tok podtalnice pri enostavnnejših primerih toka proti vodnjaku.
- Zelo dobro zna študent uporabiti Bernoullijevo enačbo za račun toka v kratkih cevovodih, kjer je možna predpostavka o idealni tekočini.
- Pri modelni podobnosti študent zna preračunati izmerjene vrednosti iz modela v naravo.
- S pomočjo enačbe upora in ustreznih tabel v priročnikih študent zna izračunati silo na telesa v toku.
- Tekom študija predmeta se študent navaja na uporabo literature ter internetnih virov in se z oddajo pisnih izdelkov ter njihovim zagovorom navaja na pisno in ustno poročanje.

Intended learning outcomes:

- Student understands properties and classification of fluids and their specifics in comparison with solids.
- Student knows the basic principles of the derivation of equations: continuity (the principle of mass conservation), dynamic (the principle of forces equilibrium) and equation of state.
- Student is able to use simplified equations for practical problems of determining forces and their points of application on gates, dams and dykes.
- With the use of potential flow theory he knows how to compute groundwater flow in simpler cases of flow against wells.
- Student is well prepared to use Bernoulli equation for flow calculation in short pipelines where the supposition of ideal fluid is possible.
- Regarding the model similarity student can calculate measured values from a model to nature.
- With the use of the fluid drag equation and appropriate tables in manuals student is able to compute the body force in fluid flow.
- During the study of the subject student becomes familiar with the use of literature and internet sources and with the delivery of written course work and its defence gets used to written and oral reporting.

Metode poučevanja in učenja:

Predavanja bodo potekala kot kombinacija klasičnih predavanj, kjer bodo glavne izpeljave, pomembne za razumevanje snovi, podane na tablo. Teoretične vsebine bodo popestrene s prikazi praktičnih primerov preko računalniških projekcij in DVD filmov. Zelo pomembno je tudi, da si študentje predstavljajo, kako voda teče, zato bodo imeli

Learning and teaching methods:

Lectures will be held as a combination of classical lessons with the main derivations, important to understand study topics, given on the blackboard. Theoretical contents will be variegated by presentations of practical examples with computer projections and DVD movies. Because it is also very important for the students to imagine how water

študentje laboratorijske vaje v manjših skupinah. Predvidena je tudi enodnevna ekskurzija z ogledom delovanja čistilne naprave, strojnice in pregrade HE ter primer sanacije alpskega jezera.	flows, they will have laboratory tutorials in smaller groups. It is also foreseen that they will attend a one day excursion including the visit of a purification station, power house and a dam site of a hydro-power plant and a site of the remediation of an alpine lake.

http://www.mko.gov.si/si/delovna_področja/odpadki/.

Cilji in kompetence:

Cilji

- Spoznati problematiko preprečevanja, nastajanja in gospodarjenja s sekundarnimi surovinami,
- spoznati procesno integrirano varstvo okolja v izbranih gospodarskih panogah in storitvah,
- spoznati fizikalno-kemične in biokemične lastnosti sekundarnih surovin, relevantnih za njihovo ponovno uporabo, predelavo ali odlaganje,
- spoznati najnovejše tehnologije ločevanja, zbiranja, ponovne uporabe, predelave in odlaganja komunalnih odpadkov,
- pridobiti znanja za načrtovanje objektov za ponovno uporabo, predelavo in odstranjevanje sekundarnih in odpadnih snovi,
- pridobiti znanja za načrtovanje inženirskih pregrad v odlagališčih,
- spoznati politike, zakonodajo in mednarodne sporazume na tem področju.

Pridobljene kompetence

- Zna načrtovati dolgoročne pristope, postopke in naprave za stalno zmanjševanje nastajanja odpadkov,

Objectives and competences:

Objectives

- To learn about the problems of prevention, generation and management of secondary raw materials,
 - to learn about production-integrated environmental protection in selected industries and services,
 - to learn about physical-chemical and biochemical properties of secondary raw materials relevant to re-use, recycling or disposal,
 - to learn about the latest technologies of separation, collection, re-use, recycling and disposal of municipal waste,
 - to acquire knowledge for the design of facilities for re-use, recycling and disposal of secondary and waste materials,
 - to acquire knowledge for the design of engineering barriers in repositories,
 - to learn about policies, legislation and international agreements in this field.
- Gained competences

<ul style="list-style-type: none"> • samostojno zna postaviti programska izhodišča in izdelati idejno zasnovo za koncept gospodarjenja s komunalnimi odpadki, • samostojno zna izdelati idejno zasnovo inženirskih pregrad v odlagališčih odpadkov. 	<ul style="list-style-type: none"> • To be able to plan long-term approaches, procedures and facilities for continuous reduction of waste, • to be able to set up programme platform and prepare a conceptual design for the management of municipal waste, • to be able to prepare a conceptual design of engineering barriers in waste repositories.
---	---

Predvideni študijski rezultati:

- Sistematičen vpogled v mesta in vzroke nastajanja surovinsko-energetske entropije družbe v njenih glavnih pojavnih oblikah in pristopi za njihovo obvladovanje.
- Koncepti trajnostnega ravnjanja s surovinami in emisijami.
- Koncepti načrtovanja inženirskih pregrad v odlagališčih odpadkov.
- Percepcija zahtev moderne družbe, zagotavljanje dobrin in organizirano gospodarjenje s sekundarnimi in odpadnimi snovmi. Prehod od linearnega k cikličnemu procesu, razvoj od »neomejenih virov« do učinkovite rabe virov, sodelovanje povzročiteljev, 3R principi, strategija vzpostavljanja družbe brez odpadkov.
- Pridobljena znanja omogočajo sistematično načrtovanje dolgoročnih pristopov, postopkov in naprav za stalno zmanjševanje nastajanja odpadkov ter za gospodarno in okoljsko sprejemljivo ravnjanje s sekundarnimi in odpadnimi snovmi.
- Teoretična znanja in praktične izkušnje ter ozaveščenost glede pomembnosti vloge inženirja na področju gospodarjenja s sekundarnimi in odpadnimi snovmi omogoča diplomantu kreativno in inovativno reševanje tovrstnih družbenih problemov.
- Vsebina predmeta s svojim interdisciplinarnim pristopom omogoča sooblikovati kritično misleče vrhunske strokovnjake, ki so usposobljeni za vzpostavljanje trajnostne družbe.

Intended learning outcomes:

- Systematic insight into the places and causes of the society entropy connected with raw materials and energy in its main forms and approaches to their management.
- Concepts of sustainable management of raw materials and emissions.
- Concepts of planning of engineering barriers in waste repositories.
- Perception of the requirements of modern society, the provision of goods and management of secondary and waste materials. Transition from linear to cyclical process, development from "unlimited resources" to efficient use of resources, cooperation of waste producers, 3R principles, strategy of establishing zero-waste society.
- The acquired knowledge enables systematic planning of long-term approaches, procedures and facilities for continuous reduction of waste as well as economically and environmentally sound management of secondary and waste materials.
- Theoretical knowledge and practical experience and awareness of the importance of the role of engineer in the field of management of secondary and waste materials allows the graduate creative and innovative solving of such social problems.
- The content of the course with its interdisciplinary approach allows educating of top professionals with critical thinking who are trained to re-establish sustainable society.

Metode poučevanja in učenja:

Snov se podaja v obliki predavanj in usmerjenih sklopov štirih ekskurzij, ki vključujejo predavanja strokovnjakov iz prakse in sledijo glavnim ciljem predmeta. Predavanjem in ekskursijam sledijo seminarske vaje, v okviru katerih študentje pripravijo programska izhodišča in samostojno izdelajo idejno zasnovo in koncept gospodarjenja z izbranimi sekundarnimi surovinami ali kritično analizirajo

Learning and teaching methods:

Knowledge is provided in the form of lectures and four directed sets of excursions that include lectures given by experts from practice who follow the main objective of the course. The lectures and excursions are followed by seminar tutorial, during which students prepare programme platform and conceptual design and management of selected secondary raw material concept or critically analyse

različne nacionalne prakse gospodarjenja s sekundarnimi surovinami.	various national practices of secondary raw material management.

Cilji in kompetence:

- Cilji
- Spoznati osnovne fizikalne zakonitosti energijskih pretvorb in specifičnosti ter hidrodinamske pojave pri različnih vrstah toka vode,
 - predstaviti področja uporabe hidravličnih izračunov ter povezanost inženirske zasnove primerov vodnega toka z okoljem preko hidravličnih robnih pogojev.
 - spoznati način hidravličnega dimenzioniranja elementov in enostavnih sistemov.

Objectives and competences:

- Objectives
- To understand of the basic physical principles of energy conversion, flow specificity and hydrodynamic phenomena in various types of water flow,
 - to present the scope of the hydraulic calculations and integration of engineering design cases of water flow in the environment through the use of hydraulic boundary conditions,
 - to understand the hydraulic design of components and simple systems.

Pridobljene kompetence	Gained competences
<ul style="list-style-type: none"> • Sposobnost pravilne definicije tokovnih razmer, njim primerne izbire ustreznih osnovnih enačb in robnih pogojev, • uporaba v stroki običajnih, prosto dostopnih računalniških programov za določanje merodajnih količin pri različnih vrstah tokov. 	<ul style="list-style-type: none"> • To be able to correctly identify specific flow types, appropriate selection of hydraulic equations and boundary conditions, • to use of state-of-the-art and freely available simulation software for flow and energy determination of different types of flows.

Temeljna literatura in viri/Readings:

- Petkovšek, A. 2006. Skripta za predmet Inženirska geologija, Ljubljana, UL FGG.
- Majes, B. 2006. Skripta za predmet Mehanika tal, Ljubljana, UI FGG.
- Ribičič, M. 2002. Inženirska geologija I in II, skripta, Ljubljana, UL FNT.
- Šuklje, L. 1984. Mehanika tal. Ljubljana, Univerza v Ljubljani, Fakulteta za arhitekturo, gradbeništvo in geodezijo.
- Nonveiller, E. 1990. Mehanika tla i temeljenje građevina. Školska knjiga, Zagreb, str. 13-309 in 401- 455.

Cilji in kompetence:**Cilji**

- Cilj predmeta je spoznati osnove geologije z namenom razumevanja sestave tal in procesov na površini, spoznati osnovne mineralogije in petrologije, bistvene fizikalne lastnosti kamnin in postopke njihovega preiskovanja, osnove tektonike in inženirske geologije s hidrogeologijo ter usvojiti osnove mehanike tal in razumeti bistvene posebnosti v primerjavi z ostalimi področji gradbeništva (odvisnost od preiskav tal, večfaznost in nelinearnost zemljin, 3D prostor).

Pridobljene kompetence

- Sposobnost komunikacije med gradbenikom in geologom,
- razumevanje geološke karte in geoloških elaboratov
- izvedba preprostih laboratorijskih preiskav,
- razumevanje preprostih geotehničnih poročil o preiskavah tal,
- računi napetosti, posedkov in stabilnosti tal pod preprostimi objekti in nasipi,
- sposobnost razumevanja in kritične presoje rezultatov.

Objectives and competences:**Objectives**

- To understand the basics of geology in order to understand the ground structure and processes on the surface, to learn the basics of mineralogy and petrology, fundamental physical properties of rocks, basics of tectonics and geology engineering, hydrogeology, to assimilate the basics of soil mechanics and to understand the essential peculiarities of geotechnical engineering in comparison to other areas of civil engineering (dependence on ground investigations, multi-phase and non-linearity of soils, 3D space).

Gained competences

- To be able to communicate with geologist,
- to understand geological maps and reports,
- to conduct simple rock and soil laboratory tests,
- to understand simple geotechnical reports based on ground investigations,
- to calculate of stresses, settlements and the stability of the ground under engineering structures and embankments,
- to understand and critically assess the results.

Predvideni študijski rezultati:

- Prepoznavanje zemljin in kamnin, pomembnih za slovenski prostor in opisovanje njihovih osnovnih lastnosti, terminologija, osnovni pojmi

Intended learning outcomes:

- Identification/recognition of soils and rocks important for the Slovenian territory, and their basic engineering properties, terminology, basic

<p>geologije, postopki preskušanja vzorcev zemljin v laboratoriju in na terenu.</p> <ul style="list-style-type: none"> Razumevanje nastanka zemeljskega površja, destruktivnih procesov na površju, odnosa med starostjo kamnin, tektoniko, mineralogijo ter lastnostmi geo-materialov, razumevanje bistvenih osnovnih pojmov mehanike tal (napetosti v tleh – totalne, efektivne, porni tlaki; konsolidacija, togost, trdnost, stabilnost), razumevanje pomena preiskav tal v gradbeništvu. Komunikacija med gradbeniki in geologi, osnovno klasificiranje zemljin in kamnin, prepoznavanje erozijskih pojavov, izvedba osnovnih laboratorijskih preiskav tal, sposobnost razumevanja geološko-geotehničke dokumentacije, uporaba enačb in postopkov za računske analize napetosti v tleh, posedkov, trajanja konsolidacije. 	<p>concepts of geology, laboratory and field/in-situ testing of soil and rocks.</p> <ul style="list-style-type: none"> The formation of the earth's surface, erosion processes, the relationship between the age of rocks, tectonics, mineralogy and properties of geo-materials, basic concepts of soil mechanics (stresses in soil, total and effective stress, pore pressure, consolidation, stiffness, shear strength, slope stability), the importance of ground investigations in civil engineering. Communication between civil engineer and geologists, basic classification of soils and rocks, identification of erosional phenomena, conducting basic laboratory tests in/on soils, ability to understand geotechnical documentation, use of equations and computational procedures for the analysis of stresses in soil, ground settlements and time of consolidation.

Gradbeni zakon GZ-1, Uradni list RS

Pravilnik o gradbiščih, Uradni list RS

Cilji in kompetence:**Cilji**

- Seznaniti študente z osnovami organizacijske vede kot izhodišče za uspešno delovanje gradbenega podjetja.
- Študentje se seznanijo s posebnostmi gradbene proizvodnje ter s procesnim pogledom na proizvodnjo, spoznajo povezavo in razmejitve tehnoloških in organizacijskih ukrepov, pomen organizacije v procesu graditve objektov.
- Nadalje je cilj predmeta, da študentje spoznajo metode za oblikovanje in spremljanje dela (osnove študija časa in dela, normiranja in plačevanja dela) ter osnove določanja cene gradbenih objektov. Študentje osvojijo osnove planiranja in vodenja projektov.

Pridobljene kompetence

- Je sposoben povezovati znanja s področja organizacije in tehnologije,
- zna uporabiti osvojeno znanje pri vodenju del od zasnove do uporabe objekta,
- zna praktično uporabiti osnovna znanja o planiranju in vodenju gradbenega projekta ter ta znanja ustrezno nadgraditi.

Objectives and competences:**Objectives**

- To familiarize students with fundamentals of organisation theory, as the starting point for successful operation of a construction enterprise.
- Students get acquainted with specific features of construction production and process considering production, get to know links and divisions of technological and organisational actions, and the importance of organisation within construction process.
- Further goal of the course is to make students familiar with methods for the design and monitoring of work (fundamentals of motion and time studies, norms and payment of work), and basics of the determination of price for structure as a whole. Fundamental knowledge from the field of project planning and management needs to be acquired.

Gained competences

- To be able to link the knowledge from the field of organisation and technology,
- to be able to use the acquired knowledge in management of works, from the conception stage to the use of the structure;
- to be able to use the fundamental knowledge from the field of project management in practice, and is able to upgrade this knowledge in an appropriate manner.

Predvideni študijski rezultati:

- Potrebno deklarativno znanje zajema poznvanje organizacije gradbenega podjetja,

Intended learning outcomes:

- The necessary declarative knowledge includes knowledge of a construction company

<p>faz gradbenega projekta, poznavanje metod študija dela in časa, poznavanje osnov normiranja in plačevanja del ter določanja cene gradbenega objekta, osnovnih tehnik terminskega in finančnega planiranja projektov v gradbeništvu ter metod nadzora in spremeljanja njihove realizacije. Razumevanje teh pojmov zagotavlja osnovo za uspešno uporabo in nadgradnjo.</p> <ul style="list-style-type: none"> • Sposobnost povezovanja pridobljenega znanja z gradbeno prakso • Uporaba pridobljenega znanja v nadaljevanju - študija na 2.stopnji. • Refleksija o razmerju med organizacijo in tehnologijo gradbenih del. • Refleksija o razmerju med pridobljenim znanjem in prakso. • Študent se pri predmetu nauči povezovati vsebine iz različnih področij v celoto (sinteza znanja). 	<p>organisation; knowledge of motion and time studies, work norms and payment options; and determination of price of a total building/structure; fundamentals of project scheduling and financial planning in construction, and surveying and following-up the execution of a project. Understanding of these concepts ensures that student can successfully use and upgrade them as required by practice.</p> <ul style="list-style-type: none"> • Ability to combine the acquired knowledge with practice in construction field; • Use of acquired knowledge on the graduate (2nd cycle) studies level. • On the relationship between organisation and technology of construction works; • On the relationship between acquired knowledge and practical experience • Student learns to link and combine contents/acquired knowledge from various scientific disciplines into a whole (knowledge synthesis).

Juvanc A. 2004. Geometrijski elementi ceste in vozišča. Ljubljana, UL FGG, PTI.

Tehnični predpisi za projektiranje cest (domači in tuji).

Cilji in kompetence:**Cilji**

- Seznaniti s transportnimi sistemi ter s stvarnimi in predpisanimi pogoji za načrtovanje cest in spremljajočih ureditev ter tehničnimi rešitvami.

Pridobljene kompetence

- Sposobnost za samostojno izdelavo enostavnega projekta za cesto,
- pridobitev sposobnosti za sodelovanje pri gospodarjenju s cestami in za skupinsko delo,
- razumevanje metod in postopkov pri načrtovanju, projektiranju in gradnji.

Objectives and competences:**Objectives**

- To be aware of the transport systems and prescribed conditions for road design and related arrangements and technical solutions.

Gained competences

- Ability to independently produce a simple project of the road,
- gaining the ability to participate in the management of roads and teamwork,
- understanding the methods and procedures for planning, designing and construction of roads.

Predvideni študijski rezultati:

- Poznavanje prometnih sistemov,
- poznavanje voznodinamičnih zakonitosti in sistema VOZNIK-VOZILO-OKOLJE in elementov ceste in način njihovega usklajevanja,
- razumevanje metod in postopkov pri načrtovanju, projektiranju in gradnji cest,
- študent pridobi sposobnost samostojnega sprejemanja odločitev, kritične presoje variantnih rešitev in sodelovanja v delovnem teamu.

Intended learning outcomes:

- Knowledge and understanding of traffic systems,
- knowledge of driving dynamic legality and system DRIVER-VEHICLE ENVIRONMENT and road elements and how they co-ordinate,
- understanding of the methods and procedures for planning, designing and construction of roads,
- student acquires the ability of independent decision-making, critical assessment of alternative solutions and participation in a team work.

Metode poučevanja in učenja:

Predavanja in uporaba pridobljenih znanj pri vajah in projektnem izdelku.

Learning and teaching methods:

Lectures and application of acquired knowledge to adapt and project product.

- Tomlinson, M.J. 2001. Foundation design and construction, Prentice Hall, 569 str.
- Učno gradivo v spletni učilnici UL FGG.

Cilji in kompetence:**Cilji**

- Nadgraditi osnove mehanike tal in jih uporabiti za aplikacije pri načrtovanju in izvedbi temeljev, zemeljskih del ter geotehničnih gradenj.
 - Zna izračunati nosilnost in posedek temelja v homogenih tleh pod preprostimi objekti, geotehnično načrtovati manj zahtevne nasipe, vkope, podporne konstrukcije, zemeljske pregrade in rutinske temelje konstrukcij.
- Pridobljene kompetence
- Zna izračunati nosilnost in posedek temelja v homogenih tleh pod preprostimi objekti, geotehnično načrtovati manj zahtevne nasipe, vkope, podporne konstrukcije, zemeljske pregrade in rutinske temelje konstrukcij.

Objectives and competences:**Objectives**

- The theoretical knowledge on soil mechanics will be upgraded and used in engineering applications for the design of foundations of structures, earthworks and geotechnical works.
- Gained competences
- To be able to calculate of bearing capacity and settlement in homogeneous ground under simple structures, geotechnical design of embankments, cuts, dams, dykes, retaining structures and routine foundations.

Predvideni študijski rezultati:

- Poznavanje načel projektiranja in gradnje nasipov, vkopov, zemeljskih pregrad, priprave temeljnih tal in uporabe geosintetikov; tehnologije gradnje plitvih in globokih temeljev, podpornih konstrukcij.
- Razumevanje toka vode v tleh, nosilnosti tal, zemeljskih pritiskov, procesa geotehničnega projektiranja od raziskav preko načrtovanja, izvedbe in opazovanja izvedenih del.
- Razumevanje varnosti pri različnih geotehničnih delih, razločevanje bistvenih pogojev, ko je mogoče plitvo temeljenje oziroma je potrebno globoko temeljenje objektov. Razumevanje potrebe po izboljšanju tal v zahtevnih pogojih.
- Sposobnost razumevanja geotehničke dokumentacije, uporaba enačb in postopkov za računske analize vkopov, nasipov, temeljenja, podpornih konstrukcij, uporaba računalniških programov za analize posedkov in globalne stabilnosti tal.

Intended learning outcomes:

- Principles of the design and construction of embankments, cuts, dams, dykes, retaining structures, ground treatment and use of geosynthetics. Construction technology of shallow and deep foundations and retaining structures.
- Understanding of groundwater flow, bearing capacity, earth pressures, process of geotechnical design from ground investigation, calculations, execution of geotechnical works to monitoring.
- Understanding of safety concept in geotechnical design. Distinguishing of the main reasons for the choice of deep or shallow foundations. Understanding that ground improvement is possible.
- Ability to understand geotechnical reports, to use equations and procedures for the analyses of cuts, embankments, foundations and retaining structures. Ability to use software for

	the calculation of settlements and slope stability.

Cilji in kompetence:**Cilji:**

- spoznati potresno nevarnost in dojeti posledice potresov na okolje in družbo,
- spoznati osnove dinamike gradbenih konstrukcij,
- spoznati osnovne pojme o potresih, potresni obtežbi in potresnoodpornem projektiraju.

Kompetence:

- študent pridobi občutek o potresni nevarnosti, posledicah potresov in se seznaniti z načini zaščite pred njimi,
- pozna osnovne značilnosti dinamičnega odziva konstrukcij z uporabo poenostavljenih metod potresne analize,

Objectives and competences:**Objectives:**

- learn about seismic hazard and understand the consequences of earthquakes on the environment and society,
- learn about the basics of structural dynamics,
- to understand basic earthquake terminology, basic concepts of seismic action and earthquake-resistant design.

Competences

- student acquires a sense of seismic hazard, the consequences of earthquakes and becomes familiar with the methods of earthquake mitigation,

<ul style="list-style-type: none"> - sposoben je grobo oceniti potresno odpornost enostavnih objektov in identificirati potresno odporne objekte, - zna uporabljati enostavne postopke za račun njenostavnejših potresnoodpornih objektov. 	<ul style="list-style-type: none"> - student can compute the dynamic response of simple structures using simplified methods of seismic analysis, - student can roughly estimate the earthquake resistance of simple structures and identify earthquake-resistant structures, - student can also apply simple procedures for seismic analysis of simple structures.

Standardi za gradbene konstrukcije Evrokod 0, Evrokod 2, Evrokod 6, Evrokod 8 (SIST EN 1990, SIST EN 1992-1-1, SIST EN 1992-1-2, SIST EN 1996-1-1, SIST EN 1998-1).

Cilji in kompetence:**Cilji**

- Spoznati mehanske in reološke lastnosti osnovnih materialov, nosilne mehanizme in načine računskega modeliranja obnašanja betonskih in zidanih konstrukcij.

Pridobljene kompetence

- Zna dimenzionirati elemente enostavnih betonskih in zidanih konstrukcij na upogibno-osno in strižno obremenitev,
- v okviru mejnega stanja uporabnosti zna po poenostavljenih postopkih določiti medsebojno oddaljenost in širino razpok ter
- oceniti pomike preprostih razpokanih armiranobetonskih linijskih konstrukcij.

Objectives and competences:**Objectives**

- Learn about mechanical and rheological properties of basic materials, load-bearing mechanisms and principles of computational modelling of the behaviour of reinforced concrete and masonry structures.

Gained competences

- Student learns to design elements of simple concrete and masonry structures to bending, axial and shear loading
- student is capable to calculate the widths and spacing of cracks of simple reinforced concrete members,
- student is capable to calculate the deflections of simple reinforced concrete members considering the influence of cracks.

Predvideni študijski rezultati:**Intended learning outcomes:**

<ul style="list-style-type: none"> Poznavanje glavnih mehanskih in reoloških lastnosti osnovnih materialov betonskih in zidanih konstrukcij. Okvirno poznavanje tehnične regulative s področja betonskih in zidanih konstrukcij. Razumevanje načinov zagotavljanja potrebne varnosti betonskih in zidanih konstrukcij. Razumevanje nosilnih mehanizmov elementov zidanih konstrukcij. Razumevanje računskih modelov za določitev nosilnosti in za dimenzioniranje prečnih prerezov in elementov armiranobetonskih konstrukcij. Razumevanje in poznavanje temeljnih načel za armiranje enostavnih betonskih konstrukcij. Uporaba postopkov za praktično dimenzioniranje prečnih prerezov in elementov armiranobetonskih in zidanih konstrukcij. Uporaba osnovnih pravil za zagotavljanje potresne varnosti enostavnih zidanih konstrukcij. 	<ul style="list-style-type: none"> Knowledge of the main mechanical and rheological properties of basic materials of concrete and masonry structures. Basic knowledge of the technical regulations from the area of concrete and masonry structures. Understanding the possible methods for providing the safety of concrete and masonry structures. Understanding loading mechanisms of masonry structural members. Understanding the computational models to define ultimate resistance and design of reinforced concrete structural members. Understanding the basic principles of reinforcing simple concrete structures. Application of procedures for the practical design of reinforced concrete and masonry structural members. Application of basic rules to provide the earthquake resistant simple masonry structures.

Cilji in kompetence:

Cilji	Spoznati osnovne pojme verjetnostnega računa in najpogosteje uporabljene statistične metode v okoljskem gradbeništvu.
Pridobljene kompetence	Pozna in uporablja osnovne pojme verjetnostnega računa,
pozna in uporablja v gradbeništvu najpogosteje uporabljene porazdelitve,	pozna pomen in lastnosti karakterističnih vrednosti, ki so osnova dimenzioniranja gradbenih objektov,
uporablja osnovne statistične metode v gradbeništvu,	to be able to apply basic statistical methods used in civil engineering,
samostojno zna uporabiti ustrezno statistično metodo glede na naravo problema.	to know and be able to apply corresponding statistical method with respect to the problem.

Objectives and competences:

Objectives	To learn about the basics of the theory of probability and statistical methods commonly used in environmental civil engineering.
Gained competences	To know the basics of the theory of probability,
	to know statistical distributions most commonly used in civil engineering,
	to know and understand the meaning of characteristic values which are the basis for structural design,
	to be able to apply basic statistical methods used in civil engineering,
	to know and be able to apply corresponding statistical method with respect to the problem.

Predvideni študijski rezultati:

- Razume osnovne pojme verjetnostnega računa,
- pozna porazdelitvene zakone, pogosto uporabljane v gradbeništvu,

Intended learning outcomes:

- To understand the basic concepts of the theory of probability,

<ul style="list-style-type: none"> • spozna osnovne statistične metode, kot so intervali zaupanja, preizkušanje domnev, bivariatna analiza in analiza variance, • samostojno izbira ustrezno statistično metodo glede na obravnavani problem in jo samostojno izvede, • razume, kaj so prednosti (in slabosti) podajanja zaključkov z določenim nivojem tveganja, • zna uporabljati domačo in tujo literature, • spretnost zbiranja in obdelave podatkov ter sposobnost predstavljanja rezultatov, • zna uporabljati pripravljena računalniška orodja in programe (Word, Excel, Mathematica). 	<p>to know basic statistical distributions commonly used in geodesy; learns about the basic statistical methods, i.e. confidence intervals, hypothesis testing, bivariate analysis, ANOVA,</p> <p>to be able to choose the most suitable statistical methods with respect to the problem and is able to perform the analysis,</p> <p>to understand the shortcomings and advantages of forming conclusions based on risk level,</p> <p>to be able to use of Slovenian and foreign literature,</p> <p>to be able to collect and analyze data, ability to represent data,</p> <ul style="list-style-type: none"> • to be able to use different software (Word, Excel, Mathematica).

Učno gradivo v spletni učilnici UL FGG.

Cilji in kompetence:

Cilji

- Podati osnovne koncepte za projektiranje in izvedbo osnovnih tehnoloških procesov pri načrtovanju in gradnji vodnih zgradb.

Pridobljene kompetence

- Sposobnost izdelave osnovnih tehnoloških projektov v pripravljalni fazi ter upravljanje osnovnih tehnoloških procesov med gradnjo vodnih zgradb,
- sposobnost prepoznavanja, spremljave in načrtovanje procesa umeščanja vodnih zgradb v okolje in prostor,

Objectives and competences:

Objectives

- To learn about the basic concepts of design and execution of basic technological processes in planning and construction of water works.

Gained competences

- Ability to elaborate basic technological design projects in the preparation stage, and management of basic technological processes during water works construction,
- ability to recognise, monitor and plan the process of site selection and placement of water works,

<ul style="list-style-type: none"> • sposobnost prepoznavanja materialov in tehnoloških postopkov priprave materialov pri gradnji vodnih zgradb. 	<ul style="list-style-type: none"> • ability to recognise materials and technological processes of material preparation in water works construction.
---	---

Predvideni študijski rezultati:**Intended learning outcomes:**

<ul style="list-style-type: none"> • Pridobljeno poglobljeno znanje za načrtovanje tehnoloških projektov priprave in organizacije gradnje vodnih zgradb, • osvojene računske spretnosti za dimenzioniranje zaščitnih ukrepov na vodnih zgradbah, • sposobnost izdelati tehnološke elaborate v vseh fazah procesa gradnje vodnih zgradb. 	<ul style="list-style-type: none"> • Acquired in-depth knowledge for planning of technological projects of preparation and organisation of water works construction, • acquired calculation skills for dimensioning of protection measures of water structures, • ability to elaborate technological reports in all stages of water work construction.

Jeziki/Languages:

Predavanja/Lectures:	Slovenščina
Vaje/Tutorial:	Slovenščina

Pogoji za vključitev v delo oz. za opravljanje**študijskih obveznosti:****Prerequisites:**

Predmet je namenjen študentom drugih študijskih programov, predvsem s področja družboslovja, zanje ni pogojev pristopa, ne more pa ga izbrati študent študijskih programov s področja gradbeništva ali vodarstva in okoljskega inženirstva	The course is intended to students of other study programs, mainly those from social sciences; no prerequisites are foreseen, but it cannot be selected by students of civil engineering or water science and environmental engineering.
--	--

Vsebina:**Content (Syllabus outline):**

Predavanja	Lectures
Opredelitev tipov naravnih nesreč. Organizacijski okvir izvajanja nalog zaščite in reševanja: (1) Vrste in pristojnosti državnih organov, regijskih in občinskih organov na področju zaščite in reševanja; (2)	Definition of the types of natural disasters. Organisation framework for performing the protection and rescue tasks: (1) Types and competences of state agencies, regional and

<p>Evropske inštitucije in mehanizmi na področju zaščite in reševanja; (3) moduli civilne zaščite in razvoj novih modulov; (4) Bilateralno sodelovanje; (5) standardni cikel zaščite in reševanja; (6) proces aktiviranja sil zaščite in reševanja.; (7) mehanizmi in postopki vodenja intervencij; (8) viri financiranja za delovanje sistema zaščite in reševanja. Zakonodaja na področju zaščite in reševanja, obveščanja in alarmiranja. Obnašanje in odziv javnosti v primeru nastopa naravnih nesreč. Mehanizmi ocenjevanja ogroženosti, postopki ocenjevanja posledic nesreč, blaženje posledic in zmanjševanje ogroženosti. Vpliv zanesljivosti (uporabljenih) podatkov in izbiro ustreznih modelov na končno oceno posledic in na obseg škode, ter pravilno zasnovano obveščanje in ukrepanje. Naravne nesreče v Republiki Sloveniji za katere obstajajo analize ogroženosti in načrti zaščite in reševanja. Sistemi za hiter odziv in podpora odločanju v primeru naravne nesreče: (1) vloga ekspertov (okoljsko gradbeništvo) v procesih cikla civilne zaščite; (2) sodelovanje in odziv javnosti v ciklu civilne zaščite v primeru naravnih nesreč. Vpliv zanesljivosti (merjenih in analiziranih) podatkov na ustrezno in pravočasno ukrepanje ob nastopu dogodka in posledični obseg škode. Sanacija posledic naravnih nesreč – pristojnosti in postopki. Percepција in odzivi.</p>	<p>municipal bodies in the field of civil protection and rescue; (2) European institutions and mechanisms for civil protection and rescue; (3) EU modules of civil protection and development of new modules; (4) bilateral cooperation; (5) standard protection and rescue cycle; (6) process of activating the protection and rescue services; (7) mechanisms and procedures of intervention management; (8) sources of financing that enable the functioning of the civil protection and rescue system. Legislation in the field of: civil protection and rescue, communication/information and alarming. Behaviour and response of public in case of natural disasters. Mechanisms of risk evaluation, procedures of disaster damage assessment, disaster mitigation and risk reduction. Data validation and selection of adequate models on the final evaluation of consequences and on the scope of damage, and impact of the data validation process on the response planning. Natural disasters in the Republic of Slovenia for which risk assessments and protection/rescue plans are prepared. Rapid response systems and decision making process in the event of natural disaster: (1) role of experts (environmental civil engineering) in the processes of the civil protection cycle; (2) cooperation and response of the public in the civil protection cycle in the event of natural disaster. Influence of (measured and analysed) data reliability on adequate and timely measures in the event of a disaster and the resulting scope of damage. Mitigation of natural disasters – competences and procedures. Perception and responses.</p>
<p>Seminar</p> <p>Uporaba pridobljenega znanja pri individualni nalogi, ki obsega uporabo modelov za določanje nevarnosti, ranljivosti in ogroženosti pred naravnimi nesrečami. Izdelava ocene ogroženosti, ocena posledic (PAR; LOL) izdelava načrta zaščite in reševanja (tudi analiza in validacija podatkov). Analiza scenarijev razvoja možne naravne nesreče. Kritično tolmačenje rezultatov in predstavitev naloge.</p>	<p>Seminar</p> <p>Use of the acquired knowledge in individual seminary work that includes the use of models for the definition of risk, vulnerability and hazard of natural disasters. Elaboration of risk assessment, assessment of consequences (PAR; LOL) elaboration of protection and rescue plan (incl. data analysis and validation) Analysis of scenarios of possible natural disaster development. Critical interpretation of results and presentation of the work.</p>

Cilji in kompetence:

Objectives and competences:

<p>Cilji</p> <ul style="list-style-type: none"> • Poznavanja organizacije zaščite in reševanja, • poznavanje pristojnosti posameznih organizacij in inštitucij, ki se vključujejo v varstvo pred naravnimi nesrečami in ukrepanje ob nastopu le-teh, • poznавanje postopkov, ki jih te organizacije izvajajo, • prepoznavanje vrst naravnih nesreč – mehanizmov nastanka in razvoja posamezne vrste in možnih posledic, • poznavanje specifičnosti posamezne vrste naravne nesreče in možnosti zgodnjega ukrepanja, omilitve škode, odziva sil zaščite in reševanja, • razumevanje razvoja naravne nesreče na učnih primerih s poudarkom na klasifikaciji ključnih faz razvoja nesreče, • razumevanje pomena preventivnega ukrepanja in ustreznega, predvsem pa pravočasnega ukrepanja v času dogodka, • razumevanje pomena zajema podatkov in uporabe primernega vzorca pri modeliranju pojavov in pri pripravi načrtov zaščite in reševanja ter kasnejšem ukrepanju. <p>Pridobljene kompetence</p> <ul style="list-style-type: none"> • Prepoznavanje različnih tipov naravnih nesreč in razvoja možnih scenarijev, • razumevanje mehanizmov nastanka naravne nesreče in različnih faz odziva nanje, • poznavanje organizacije zaščite in reševanja ter sposobnost vključevanja v strukturo civilne zaščite, • poznavanje protokolov obveščanja in alarmiranja ter protokolov ukrepanja, 	<p>Objectives</p> <ul style="list-style-type: none"> • Understanding the protection and rescue organisation • understanding the competences of individual organisations and institutions involved in the protection against natural disasters and their actions taken in such events, • understanding the procedures applied by these organisations, • recognising the types of natural disasters – mechanisms of their appearance, development of individual types and the possible consequences, • understanding the specifics of individual type of natural disaster and possibilities of early actions, damage mitigation, protection and rescue response actions, • understanding the development of natural disaster on case studies with the emphasis on the classification of key phases of disaster development, • understanding the importance of preventive actions and adequate, most importantly timely, actions during the event, • understanding the importance of data acquisition and use of appropriate sample for modelling the phenomena and preparing the protection and rescue plans as well as subsequent actions. <p>Gained competences</p> <ul style="list-style-type: none"> • Recognising different types of natural disasters and development of possible scenarios, • understanding mechanisms for the appearance of natural disaster and different phases of response to it,
--	--

<ul style="list-style-type: none"> • sposobnost razumevanja državnega in mednarodnega okolja v katerem sile zaščite in reševanja delujejo. 	<ul style="list-style-type: none"> • understanding the protection and rescue organisation and ability of participating in the civil protection structure/processes. • understanding the communication and alarm protocols as well as action protocols, • ability to understand national and international environment where the protection and rescue services operate.
---	--

Predvideni študijski rezultati:

- Razumevanje osnovnih terminov na področju varstva pred naravnimi in drugimi nesrečami,
- organizacijske sheme zaščite pred naravnimi nesrečami in reševanja v primeru nastopa le-teh,
- poznavanje protokolov obveščanja in alarmiranja,
- razlikovanje med preventivnimi ukrepi in ukrepanjem med in po dogodkih
- poznavanje specifičnih procesov, ki se navezujejo na postopke odločanja v primeru naravnih nesreč,
- poznavanje faz načrtovanja oz. pripravljenosti/preventive kot ključne faze za sistemsko zmanjšanje ogroženosti,
- poznavanje faz intervencije in njenih specifičnih elementov,
- poznavanje faz blaženja posledic (mitigacija) in njenih specifičnih elementov,
- vloge različnih znanj in strokovnjakov (ekspertov) v procesu varstva pred naravnimi nesrečami in nadalje ob nastopu naravne nesreče,
- znanje za prenos rezultatov modelov za analizo nevarnosti naravne nesreče s ciljem podpore institucijam zaščite in reševanja,
- prenos znanj o modeliranju pojavov v praktično okolje, ki jim je uporabnik izpostavljen v primeru naravnih nesreč,
- uporaba znanj pri kritičnem snovanju rešitev v vsakodnevni praksi,
- uporaba pridobljenega znanja pri predmetih, kjer se obravnava pojave, ki so lahko tudi naravne nesreče za poglobljeno razumevanje namena modeliranja.

Intended learning outcomes:

- Understanding of basic terms in the area of protection against natural and other disasters,
- To know organisation schemes of protection against natural disasters and rescue in case of disasters,
- To know communication and alarm protocols,
- To distinguishing between preventive measures and actions during and after events,
- To know specific processes related to the decision making actions in events of natural disasters,
- To know phases of planning or preparedness/prevention as key phases for systematic risk reduction,
- To know intervention phases and their specific elements,
- To know mitigation phase and its specific elements,
- roles of different knowledge and experts in the process of protection against natural disasters and later with the appearance of natural disaster,
- knowledge related to the transfer of results of models for the risk analysis of natural disaster with the aim to support protection and rescue institutions,
- Transfer of knowledge on modelling the phenomena that a user is exposed to in the event of natural disaster into practical environment,
- use of the acquired knowledge for critical design of solutions in everyday practice,
- use of the acquired knowledge in courses that deal with phenomena which may also be natural disasters, for in-depth understanding of the purpose of modelling.

Metode poučevanja in učenja:

Predavanja in uporaba pridobljenih znanj pri izdelavi individualne seminarske naloge.

Learning and teaching methods:

Lectures and use of the acquired knowledge for the elaboration of individual seminar work.

Načini ocenjevanja:**Delež/Weight Assessment:**

Seminarska naloga	50,00 %	Seminar work
Pisni in/ali ustni izpit	50,00 %	Written and/or oral exam

Temeljna literatura in viri/Readings:

Hoffman, B.A. Rattner, G.A. Burton and J. Cairns. 2002. Handbook of Ecotoxicology. Second Edition. Lewis, Boca Raton, FL, USA.

Walker C. H. et al. 2001, 2012. Principles of ecotoxicology. CRC, Francis and Taylor Group, Boca Raton, FL, USA.

Cilji in kompetence:**Cilji**

- Posredovanje osnovnega znanja o ekosistemu ter o posledicah vplivov na ekosistem. Med temi vplivi bo v ospredju onesnaževanje.
- Poudarek pri predmetu bo tudi na razumevanju kvarnega delovanja onesnažil na organizme in združbe.
- Slušatelji se bodo seznanili z načini ugotavljanja posledic onesnaževanja. Ti načini so: testiranje strupenosti, dolgorajno spremeljanje stanja v okolju (monitoring) in modeliranje razsežnosti vplivov. Ta znanja bodo združili pri oceni tveganja na okolje.
- Cilj predmeta je usposobiti slušatelje za delovanje v interdisciplinarnem timu zadolženem za sprejemanje odločitev o okolju.

Pridobljene kompetence

- Sposobnost razumevanja bioloških in kemijskih podatkov pridobljenih v postopku ocene tveganja (rezultati testiranja strupenosti, podatki kemijskega in biološkega monitoringa stanja okolja, interpretacija zakonodaje na področju okolja).
- Sposobnost sodelovanja pri oblikovanju zakonodaje iz področja okolja; del, ki se nanaša na posege v okolje, varovanje narave, načrtovanje spremeljanja stanja ipd.)
- Iskanje, razumevanje in povezovanje vrhunskih znanstvenih objav, strokovnih poročil in v laboratoriju ali na terenu pridobljenih podatkov o stanju v okolju.

Objectives and competences:**Objectives**

- To educate on the basic knowledge regarding ecosystem and effects of pollution on the ecosystems.
- The focus will be set on the understanding of pollutants' toxic effects on organisms and communities.
- The means of determining toxic effects will be introduced. Among these are: toxicity tests, biomonitoring, and environmental modelling. This information will be used in risk assessment.
- The aim of the course is to teach the students to participate in teams designed to take action in environmental policy decisions.

Gained competences

- The ability to understand biological and chemical data gained in toxicity tests and biomonitoring,
- The ability to participate in the design of environmental policy, environment preservation schemes and projects, environmental protection plans,
- The knowledge required to search, understand and link scientific publications, skills to write work reports in the field as well as in the laboratory.

Predvideni študijski rezultati:

- Znanje in razumevanje osnovnih terminov iz področja ekologije, ekotoksikologije in ocene tveganja osnove ekologije (odnosi med organizmi ter odnosi med organizmi in okolje) razumevanje onesnaževanja okolja, posledice le-

Intended learning outcomes:

- Knowledge and understanding of basic definitions from the field of ecology, ecotoxicology and risk assessment, basics of ecology (intra-, inter- species relations)

<p>tega in razumevanje načinov vrednotenja razsežnosti onesnaževanja in posledic na ekosistem.</p> <ul style="list-style-type: none"> • Sodelovanje v interdisciplinarnih timih. • Kritično presojanje rezultatov testiranja strupenosti in okoljskega monitoring. • Sodelovanje pri oceni tvegana za okolje. • Uporaba pridobljenega znanja pri presojanju nastajanja zakonskih aktov, priporočil in spremembah le-teh. 	<p>understanding of environmental pollution control and prevention.</p> <ul style="list-style-type: none"> • Participations in interdisciplinary work teams. • Critical judgment of toxicity test and environmental risk assessment data. • Participation in environmental risk assessments. • Use of acquired knowledge to develop environmental policy regulations.

Temeljna literatura in viri/Readings:

- Newnan, D., Eschenbach, T., Lavelle, J. 2020. Engineering Economic Analysis, Oxford University Press. 14th Edition.
- Achterberg E., Hinfelaar,J., Bocken N.: The Value Hill Business Model Tool: identifying gaps and opportunities in a circular network. scienceandtheenergychallenge.nl, 2016.
- Izbrani znanstveni in strokovni članki / Selected scientific and professional papers

Cilji in kompetence:

- Cilji**
- Seznaniti slušatelja z naprednim ekonomskim analitičnim aparatom, ki omogoča reševanje realnih ekonomskih problemov.
 - Prikaz uporabe analitičnih metod na primerih s področja okolijskega inženirstva.
 - Razviti širok in sistematičen vpogled v pomen uporabe krožnih načel pri upravljanju voda,
 - Razviti sposobnost empirične ocene dejavnikov, ki podpirajo ali ovirajo krožne priložnosti, in identificirati glavne ovire za krožno preobrazbo v danem ekosistemu.
- Pridobljene kompetence**
- Sposobnost kritične presoje ekonomskih odločitev,
 - sposobnost razumevanja ekonomskih pojavov in izbiro ustreznegra analitičnega orodja,
 - sposobnost aplikacije ekonomskih konceptov na primerih okolijskega inženirstva, sposobnost razumeti specifike in načine oblikovanja krožnega poslovnega modela.

Objectives and competences:

- Objectives**
- To acquaint student with the analytical framework that allows understanding of real economic problems.
 - Demonstrating of the use of analytical methods on examples from the field of environmental engineering.
 - Develop a broad and systematic insight into the importance of the application of circular principles to water management
 - Develop the ability to empirically assess the factors supporting or hindering circular opportunities and identify main obstacles for the circular transformation in a given ecosystem
- Gained competences**
- Ability to critically assess economic decisions,
 - ability to understand economic phenomena in the case of environmental engineering, the ability to understand the specifics and ways of creating a circular business model.

Predvideni študijski rezultati:**Intended learning outcomes:**

<ul style="list-style-type: none"> • Znanje in razumevanje naprednih metod ekonomske analize, • razumevanje medsebojnega vpliva procesov na ravni podjetja in v gospodarstvu, • razumevanje delovanja numeričnih modelov pri reševanju problemov ekonomike, • uporaba modelov marginalnega ocenjevanja škod in koristi pri presoji inženirskih rešitev, • kritično presojanje inženirskih rešitev, • uporabiti pridobljeno znanje v realni projektni nalogi, • spoznati specifike dela v skupini in pridobiti neposredne izkušnje s sodelovanjem v skupinski projektni nalogi. 	<ul style="list-style-type: none"> • Knowledge and understanding of advanced concepts of economic analysis, • understanding of interaction of processes on the level of company and economy, • understanding of operations of numerical models in solving business problems, • using models of marginal damage and benefit assessment in evaluating engineering solutions, • critical assessment of engineering solutions, • use of knowledge in courses where basic economic concepts are necessary, • apply the acquired knowledge in a real-life project assignment, • learn about collaboration and acquire a first-hand experience through the collaboration in the group project assignment.
