

Učni načrti

Magistrski študijski program druge stopnje

STAVBARSTVO (MA)

Course Syllabi

2nd Cycle Master Study

BUILDINGS (MA)

Velja od 2024/2025 | Valid from 2024/2025

Veljavni študijski program na dan 20.1.2024 | Valid study programme at January 20, 2024

KAZALO / TABLE OF CONTENTS

1. LETNIK / 1ST YEAR

Diferencialne enačbe in geometrija / Differential equations and geometry	3
Dnevna svetloba / Daylight	6
Projektiranje nosilnih konstrukcij stavb I / Design of building structures I	10
Požar / Fire	15
Praktično usposabljanje / Practical training	18
Projektiranje nosilnih konstrukcij stavb II / Design of building structures II	22
Konstruktivna gradbena fizika / Structural building physics	26
Informacijsko modeliranje stavb / Building information modelling	29

2. LETNIK / 2ND YEAR

Napredni materiali / Advanced materials	32
Učinkovita raba energije / Efficient energy use	35
Bivalno okolje / Living environment	38
Avtomatsko vodenje sistemov / Automatic management of systems	41
Vrednotenje trajnosti stavb / Building sustainability assessment	44
Pametna hiša / Smart House	48
Magistrski seminar / Master seminar	51
Magistrsko delo / Master thesis	54

STROKOVNI IZBIRNI PREDMETI / PROFESSIONAL ELECTIVE COURSES

Tehnologija instalacij / Technology of installations	57
Informacijske in komunikacijske tehnologije v grajenem okolju / Information and communication technologies in built environment	60
Športna vzgoja / Sports education	64
Zapiranje snovnih tokov pri stavbah in naseljih / Closing material cycles in buildings and agglomerations	68

UČNI NAČRT PREDMETA/COURSE SYLLABUS

Predmet:	
	DIFERENCIALNE ENAČBE IN GEOMETRIJA
Course title:	
	DIFFERENTIAL EQUATIONS AND GEOMETRY

Študijski programi in stopnja	Študijska smer	Letnik	Semestri
Stavbarstvo, druga stopnja, magistrski	Ni členitve (študijski program)	1. letnik	Zimski

Univerzitetna koda predmeta/University course code:

Predavanja	Seminar	Vaje	Klinične vaje	Druge oblike študija	Samostojno delo	ECTS
60	0	0	30	0	90	6

Nosilec predmeta/Lecturer:

Vrsta predmeta/Course type:

Jeziki/Languages:	Predavanja/Lectures:	Slovenščina
	Vaje/Tutorial:	Slovenščina

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Opravljen izpit iz predmetov Matematika I in Matematika II oz. iz drugih predmetov s primerljivo vsebino.

Prerequisites:

Passed exams in Mathematics I and Mathematics II, or other courses with comparable content.

Vsebina:

- Navadne diferencialne enačbe: LDE n-tega reda, linearni sistemi, robni problemi, Fourierove vrste, numerično reševanje.
- Parcialne diferencialne enačbe: toplotna in valovna enačba, začetni in robni problemi, Laplaceova transformacija, numerično reševanje.
- Vektorji v prostoru in operacije z njimi.
- Linearne in afine preslikave, matrike.
- Krivulje v ravnini in prostoru: parametrizacija, aproksimacija, Bezierove krivulje, B-zlepki.
- Ploskve: gladka elementarna ploskev, parametrizacija, odsekoma gladka ploskev,

Content (Syllabus outline):

- Ordinary differential equations: LDE of order n, linear systems, boundary value problems, Fourier series, numerical methods.
- Partial differential equations: heat and wave equations, initial and boundary value problems, Laplace transformation, numerical methods.
- Vectors in space and operations with them.
- Linear and affine transformations, matrices.
- Curves in plane and space: parameterisation, approximation, Bezier curves, B-splines.
- Surfaces: elementary smooth surfaces, parameterisation, piecewise smooth surfaces,

premonosne ploskve, rotacijske ploskve, aproksimacija, Bezierove ploskve, dvodimenzionalni kubični B-zlepki.	ruled surfaces, surfaces of revolution, approximations, Bezier surfaces, twodimensional cubic B-splines.

Temeljna literatura in viri/Readings:

Braun, M. (1993). *Differential Equations and Their Applications*, Springer-Verlag.

Farin, G. 2002. *Curves and surfaces for CAGD*. Morgan – Kaufmann.

Kappraff, J. 1991. *Connections – the geometric bridge between art and science*. World scientific.

Pinchover, Y., Rubinstein, J., *An Introduction to Partial Differential Equations*, Cambridge University Press, 2005.

Cilji in kompetence:**Cilji:**

- Omogočiti razumevanje matematičnega aparata, ki ga uporabljajo strokovni predmeti.
- Predstaviti različne oblike diferencialnih enačb in metode za njihovo reševanje.
- Zagotoviti solidno razumevanje osnov geometrije.
- Seznaniti z uporabo računalniških orodij za numerično reševanje diferencialnih enačb in za geometrijsko oblikovanje.
- Vpeljati v samostojno in timsko projektno orientirano delo.

Pridobljene kompetence:

- Zmožnost prepoznavanja diferencialne enačbe in izbire ustreznega orodja za iskanje rešitev.
- Sposobnost rešitve nekaterih netrivialnih geometrijskih problemov s kombiniranjem znanja matematike in računalništva.
- Pridobitev ustrezne literature/podpore.

Objectives and competences:**Objectives:**

- To enable understanding of mathematical tools used by engineering courses.
- To present different forms of differential equations and methods for solving them.
- To ensure solid understanding of basics of geometry.
- To get acquainted with the application of computer software for numerical solving of differential equations and for geometric design.
- To introduce project based working, individually as well as in a team.

Gained competences:

- To be capable to recognize the differential equation and to choose the appropriate tools for seeking the solutions.
- To be able to combine mathematical and computational knowledge in order to solve some nontrivial problems in geometry.
- Skills in acquisition of the appropriate literature.

Predvideni študijski rezultati:

- Uporaba diferencialnih enačb pri modeliranju inženirskih problemov.
- Poglobljeno razumevanje geometrije v prostoru.
- Obvladovanje matematičnega aparata do stopnje, ko se lahko suvereno uporablja zmogljiv računalniški program.
- Sposobnost kritične presoje dobljenih računalniških rezultatov.

Intended learning outcomes:

- Application of differential equations for modelling of problems in engineering.
- In-depth understanding of the geometry in three dimensions.
- Mastering theoretical knowledge to be able to use an efficient computational tool
- Capability of a critical judgement of the obtained numerical results.

Metode poučevanja in učenja:**Learning and teaching methods:**

Predavanja, seminarske naloge, laboratorijske vaje, domače naloge.	Lectures, tutorials, consultations, internet.
--	---

Načini ocenjevanja:**Delež/Weight Assessment:**

Načini ocenjevanja:	Delež/Weight	Assessment:
Računske naloge in sprotno delo	70,00 %	Exercises and homework
Izpit (teoretičen del)	30,00 %	Exam (theoretical part)

Študijsko gradivo dostopno na: e-učilnici UL FGG

Cilji in kompetence:

Cilji:

- Izboljšanje kakovosti grajenega okolja.
- Zmanjševanje negativnih vplivov na zunanje okolje.
- Učinkovita izraba virov.
- Pridobivanje znanja, tehničnih spretnosti in oblikovanje inovacijske sposobnosti za dvig kakovosti projektov.

Pridobljene kompetence:

- Obvlada prenos sistema zunanje okolje-ovojnotranje okolje-človek v konceptualizacijo realne stavbe (navezovanje na ostale gradbeno-fizikalne vplive).
- Razume značilnosti in delovanje sistemov transparentnih delov stavbnega ovoja in njihovih realizacij.
- Pozna izhodišča kontrolnih sistemov in njihovo vlogo pri optimizaciji delovanja odprtín.
- Sposoben je zasnovati in optimizirati sistem svetlobnih odprtín na stavbnem ovoju.

Objectives and competences:

Objectives:

- The main objectives of the course are to improve the quality of the built environment.
- To minimize negative impacts on the environment.
- Efficient use of natural resources.
- To acquire knowledge and technical skills for improving the quality of building projects.

Gained competences:

- Mastering the transfer of the analysed system: outdoor environment-building envelope-indoor environment-human (in the framework of real building case; linking daylight design to other fields of building physics).
- Understanding the main characteristics and functioning of transparent constructional complexes and their implementation.
- Getting familiar with the basics of control systems and their role in the optimization of transparent constructional complexes functioning.

<ul style="list-style-type: none"> • Sposoben je uporabljati računske metode in programsko opremo za področje dnevnega osvetljevanja in osončenja. • Sposoben je kritično oceniti in interpretirati pridobljene podatke (rezultate). • Obvlada veljavno zakonodajo za področje dnevnega osvetljevanja in osončenja stavb. 	<ul style="list-style-type: none"> • Ability to design and optimize a proposed system of transparent constructional complexes. • Ability to use calculation methods and computer software for daylight illuminance and building insolation analyses. • Critical evaluation and interpretation of results. • Getting familiar with current legislation from the field of daylight illuminance and insolation of buildings.
--	---

Predvideni študijski rezultati:

<ul style="list-style-type: none"> • Razumevanje delovanja transparentnih delov stavbnega ovoja, zasnova in analiza vplivov direktnega osončenja in zajema dnevne svetlobe v stavbi, sposobnost ocene odziva stavbe na osončenje in dnevno svetlobo. • Uporaba računskih metod in programske opreme za analizo obravnavanih elementov svetlobnega in (posredno) toplotnega odziva stavbe oziroma prostora. • Sposobnost samostojne ocene položaja in vloge obravnavanih elementov v sistemu okolje/človek/stavba. • Identifikacija medsebojnih povezav. • Spretnosti uporabe domače in tuje literature in drugih virov, zbiranja in interpretiranja podatkov, identifikacija. • Reševanje problemov, kritična analiza, sinteza, delo v skupini. 	<ul style="list-style-type: none"> • Understanding the functioning of transparent constructional complexes, design and analysis of the effects of insolation and daylight in the buildings, ability to assess the building response to the insolation and daylight. • Application of calculation methods and computer software simulations to analyse the evaluated elements with regard to daylighting and indirectly also to thermal response of a building and its active spaces. • Ability to evaluate the status and the role of the analysed elements in the system: environment/human/building, identification of interconnections. • Skills for review of relevant literature sources and other references (national, international), data collecting and interpreting, problem identification, problem solving, critical analysis, synthesis, group work.
---	--

Intended learning outcomes:**Metode poučevanja in učenja:**

Predavanja, seminarske in laboratorijske vaje.	Lectures, tutorial, laboratory work.
--	--------------------------------------

Learning and teaching methods:**Načini ocenjevanja:****Delež/Weight Assessment:**

pisni izpit	30,00 %	Written exam
Ocena izdelka vaj	70,00 %	Tutorial and laboratory work

Jeziki/Languages:	Predavanja/Lectures:	Slovenščina
	Vaje/Tutorial:	Slovenščina

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Prerequisites:

Obveznih pogojev ni, vendar je delo študenta pri predmetu zelo oteženo, če nima osnovnega znanja statike, geotehnike, potresnega inženirstva in dimenzioniranja armiranobetonski elementov.

There are no mandatory prerequisites, however the work of the student will be very difficult without the basic knowledge of statics, geotechnics, earthquake engineering, and dimensioning of reinforced concrete structural elements.

Vsebina:

Content (Syllabus outline):

Predavanja:

Predavanja potekajo v več delih:

Dolšek: Potresnoodporno projektiranje stavb;

Bratina: Projektiranje betonskih stavb;

Pulko: Geotehnično projektiranje.

Lectures:

Lectures are composed of three basic parts/courses:

Dolšek: Earthquake resistant design of buildings;

Bratina: Design of Concrete Buildings;

Pulko: Geotechnical Design.

Earthquake-resistant design of buildings:

<p>Potresnoodporno projektiranje stavb:</p> <p>Uvod v projektiranje stavb na potresnih območjih, zasnova in osnovna načela za potresnoodporno projektiranje stavb, osnove projektne potresne obtežbe, Osnovne metode potresne analize stavb (dinamična in modalna analiza), Zagotavljanje duktilnosti in principe načrtovanja nosilnosti potresno odpornih stavb, teoretične osnove programske opreme za analizo in dimenzioniranje stavb.</p> <p>Projektiranje betonskih stavb:</p> <p>Načela snovanja in projektiranja masivnih konstrukcij; pregled osnovnih skupin elementov nosilnih konstrukcij masivnih stavb s pripadajočimi značilnostmi glede nosilnosti in deformabilnosti ter konstrukcijskih posebnosti; ključna merila za smotno izbiro tipa konstrukcijskega sistema; projektna obtežba; prevedba nosilnega sistema konstrukcije v ustrezen računski model; dimenzioniranje karakterističnih elementov armiranobetonske nosilne konstrukcije na mejna stanja; konstruiranje armature in detajlov.</p> <p>Geotehnično projektiranje:</p> <p>Osnovne zahteve pri temeljenju stavb. Plitvo in globoko temeljenje objektov. Osnovni postopki projektiranja temeljev ob upoštevanju interakcije med temeljnimi tlemi in objektom.</p> <p>Vaje in seminar:</p> <p>Pri posameznih temah se najprej izdelava nekaj preprostih domačih nalog, ki podajo oziroma utrdijo znanja iz konstruiranja.</p> <p>Nato sledi seminarska naloga, ki obsega analizo in dimenzioniranje tipične armiranobetonske stavbe.</p>	<p>Introduction into design of building structures against seismic actions, conceptual design and basic principles of earthquake-resistant buildings, basis of design seismic action, basic methods of seismic analysis of buildings (response history and spectrum analysis), Ductility and capacity design for earthquake-resistant structures, theoretical background for the introduced computer programs.</p> <p>Design of reinforced concrete buildings:</p> <p>Principles of the design of concrete structures; Overview of basic groups of structural members for concrete buildings, related properties regarding ultimate resistance and deformability as well as structural specifics; key criteria for effective selection of the type of structural system; design loads of concrete structures; translation of load-bearing system of a structure into appropriate computational model; design of the characteristics elements of reinforced concrete load-bearing structure to the limit states; design and detailing of reinforcement.</p> <p>Geotechnical design:</p> <p>Basic requirements for the foundation design. Shallow and deep foundations of structures. Basic methods for the foundation design based on soil-structure interaction.</p> <p>Tutorials and seminar:</p> <p>Some simple tutorials will be made to enhance the knowledge related to specific topics of analysis and design of building structures.</p> <p>Then follow seminar work that includes analysis and dimensioning of typical reinforced concrete building.</p>

IZS 2009. Priročnik za projektiranje gradbenih konstrukcij po Evrokod standardih (ur. Beg, D., Pogačnik, A), poglavja 0: Evrokod 0 – Osnove projektiranja (110 str.), poglavje 2: Evrokod 2 - Projektiranje betonskih konstrukcij (137 str.), poglavje 7: Evrokod 7 – Geotehnično projektiranje (110 str.), poglavje 8: Evrokod 8 – Projektiranje potresnoodpornih konstrukcij (219 str.).

EASY (Earthquake Engineering Slide Information System), IKPIR FGG, CD ali www.ikpir.fgg.uni-lj.si/EASY.

Cilji in kompetence:**Cilji:**

- Razložiti in naučiti standardne postopke za potresno analizo in principe za zagotavljanje mehanske odpornosti in stabilnosti konstrukcij stavb iz različnih materialov (betona, jekla, lesa, zidov).
- Razložiti in naučiti postopke za zagotavljanje mehanske odpornosti in stabilnosti armiranobetonskih stavb.
- Razložiti in naučiti standardne postopke za zagotavljanje mehanske odpornosti in stabilnosti temeljev.

Pridobljene kompetence:

- Poznavanje in razumevanje odziva stavb na potresne in druge vplive ter s tem povezane zasnove konstrukcijskega sistema.
- Razumevanje mehanizmov prenosa obtežbe preko konstrukcijskih sklopov v temeljna tla in osnovnih principov zagotavljanja potresne odpornosti konstrukcij stavb.
- Sposobnost uporabe računskih metod in programske opreme za projektiranje nosilnih konstrukcij stavb in njihovih temeljev.
- Poznavanje sodobnih IT podprtih orodij v projektiranju.

Objectives and competences:**Objectives:**

- To explain and teach the procedures for analysis and concepts for ensuring earthquake-resistance of building structures made of different materials (concrete, steel, timber, masonry).
- To explain and teach the procedures for ensuring mechanical resistance and stability of reinforced concrete buildings.
- To explain and teach standard procedures for ensuring the mechanical resistance and stability of foundations.

Gained competences:

- The knowledge and understanding of response of building structures on seismic and other actions and related optimal selection of structural system.
- The competence of understanding the load transfer through the structure into the foundation soil.
- The competence of understanding the basic factors contributing to earthquake resistance of structures.
- The ability to use computer software in the design of structural systems of buildings.
- The ability to use the IT supported tools in design.

Predvideni študijski rezultati:

- Razumevanje delovanja konstrukcijskih sklopov in konstrukcije kot celote ter prenosa obtežbe v temeljna tla.
- Znanje določitve optimalnega sistema temeljenja.
- Razumevanje dejavnikov za zagotavljanje duktilnosti in nosilnosti potresno odpornih konstrukcij in znanje oblikovanja ustreznih konstrukcijskih detajlov.
- Sposobnost uporabe računskih metod in programske opreme za projektiranje nosilnih konstrukcij stavb in njihovih temeljev.
- Sposobnost identifikacije in kvantifikacije kritičnih obtežb.
- Kompetentna uporaba evropskih standardov za projektiranje potresnoodpornih konstrukcij, armiranobetonskih stavb in temeljev v skladu s standardom Evrokod.
- Identifikacija in reševanje problemov, kritična analiza, argumentirana izbira med več možnostmi, sinteza, delo v skupini.

Intended learning outcomes:

- Understanding the role of the structure and its subassemblies in the transfer of loads into the foundation soil.
- The knowledge, how to choose a suitable foundation system.
- Understanding of the key factors contributing to the ductility and strength of earthquake resistant structures.
- The knowledge to choose and produce suitable structural details.
- The use of the design methods and computer software for structural systems (including foundations).
- The knowledge to identify and quantify critical loads on structures.
- The knowledge of the competent use of the European standards (Eurocode) for the earthquake-resistant design of structures, for design of reinforced concrete structures and foundations.

	<ul style="list-style-type: none"> Transferable skills include: identification and solving of problems; critical assessment and analysis; argued choice between several options; ability of the synthesis; and working in a group.
--	---

Metode poučevanja in učenja:

Predavanje, vaje in seminarska naloga. Predmet temelji na sodobnih metodah poučevanja, kot so projektno učenje, timsko delo in individualno delo med učiteljem in študentom, poučevanje s poudarkom na interesu študentov.

Learning and teaching methods:

Lectures, tutorials and seminar. The course is based on up-to-date teaching methods – project based learning, team work and individual work between teacher and student, student centred teaching and just-in-time lectures.

Načini ocenjevanja:**Delež/Weight****Assessment:**

Individualno delo (vaje, seminar) med letom	50,00 %	Individual work during the course
Izpit (računski in teoretičen del)	50,00 %	Exam (computational and theoretical part)

Temeljna literatura in viri/Readings:

Buchanan, A. H. 2005. Structural design for fire safety. John Wiley & sons Ltd.

Wald F. et al. 2004. Vypočet požarni odolnosti stavebnih konstrukci, Tehniška univerza v Pragi.

Direktiva o gradbenih proizvodih, CPD 89/106, Bistvena zahteva št.2 "Požarna varnost".

Evrokod EN 1991-1-2 in požarni deli Evrokodov za lesene, armiranobetonske in jeklene konstrukcije.

Učno gradivo v spletni učilnici.

Cilji in kompetence:

Cilji:

- Nadgraditi osnovno znanje stavbarstva in konstrukterstva z načeli projektiranja požarno varnih stavb.
- Podati osnovne ugotovitve o nastanku, razvoju in poteku požarov v zgradbah in naravnem okolju.
- Seznaniti študente z modeli požarne obtežbe skladno z Evrokodom EN 1991-1-2 in z ukrepi aktivne in pasivne požarne zaščite.
- Privzgojiti občutek za pomen ukrepov požarne zaščite v luči socioloških, naselitvenih, ekonomskih in drugih faktorjev.
- Povezati znanja iz drugih predmetov s požarnimi problemi.
- Vpeljati osnovna načela požarno varnega projektiranja lesenih, armiranobetonskih in jeklenih konstrukcij.

Pridobljene kompetence:

- Sposobnost ocene požarne ogroženosti objekta ter načrtovanja ukrepov požarne zaščite.
- Sposobnost izbire primerne modela požarne obtežbe. Sposobnost uporabe poenostavljenih računskih metod za oceno požarne odpornosti enostavnih nosilnih konstrukcij.
- Sposobnost izdelave požarnega elaborata za preproste objekte.

Objectives and competences:

Objectives:

- To upgrade the basic knowledge of architecture and design with principles of fire-resistant buildings.
- To provide the basic knowledge on the growth, development and progress of fires in buildings and natural environment.
- To familiarize students with models of fire load in accordance with EN 1991-1-2 standard and measures of active and passive fire protection.
- To obtain a sense of the importance of fire.
- Safety measures in the light of sociological, urban, economic and other factors.
- To relate knowledge from other courses with fire problems.
- To introduce the basic principles of fire safety design of timber, reinforced concrete and steel structures.

Gained competences:

- Ability to perform the fire safety assessment of a building and design fire protection measures
- Ability of selecting an appropriate fire load model. Ability to use the simplified calculation methods for the assessment of fire resistance of simple load-bearing structures.
- Ability to design fire study for simple objects.

Predvideni študijski rezultati:

- Razumevanje pomena požarnega inženirstva. Razumevanje fizikalnih osnov nastanka in

Intended learning outcomes:

- Understanding the importance of fire safety engineering. Understanding the physical basis of

<p>razvoja požara ter vpliva visokih temperatur na materiale in konstrukcije.</p> <ul style="list-style-type: none"> • Znanje osnovnih metod in ukrepov aktivne in pasivne požarne zaščite. • Uporaba pridobljenega znanja pri pripravi magistrskega dela in pri samostojnem ali skupinskem reševanju požarnih problemov na delovnem mestu v praksi. • Povezava pridobljenega znanja z različnih področij naravoslovja in tehnike s problemi požarnega inženirstva. Kritično ovrednotenje računskih modelov in poenostavitev v okviru standardov in predpisov. • Uporaba domače in tuje literature ter evropskih standardov in predpisov s področja požarnega inženirstva. Pridobivanje podatkov s svetovnega spleta, uporaba domačih in tujih baz podatkov. • Izdelava in uporaba preprostih računalniških orodij za reševanje požarnih problemov. • Uporaba razpoložljive programske opreme. 	<p>the growth and evolution of fire and influence of high temperatures on materials and structures.</p> <ul style="list-style-type: none"> • Knowledge of basic methods and measures of • Active and passive fire protection. • Using the knowledge gained at this course in the preparation of the master thesis and when solving practical fire issue problems individually or in a group in practice. • Link of the acquired knowledge from different fields of science and technology with the problems of fire engineering. Critical evaluation of computational models and simplification in the context of standards and regulations. • Use of a domestic and foreign literature and European standards and regulations in the field of fire engineering. • Obtaining information from the World Wide Web, use of domestic and foreign databases. Development and use of simple computational tools for solving fire problems. • Use of the available software.

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Prerequisites:

Vsebina:	Content (Syllabus outline):
Študent se seznani in opravlja delo, ki ga opravlja diplomant tega študija v praksi. Predvsem: se seznani z organizacijsko strukturo in tehnologijo gradbenega podjetja, se seznani s predpisi o varstvu pri delu in njihovi izvedbi v praksi, de seznani se z aktualnim dogajanjem v gradbenem podjetju, spozna menedžerski vidik dela v podjetju, dela na terenu – aktualnem gradbišču, oziroma v pisarni - samostojno opravi dela na aktualnem projektu pod vodstvom mentorja, razvija uporabo znanstvenoraziskovalnih metod v širšem spektru problemov v stroki, razvija kritične refleksije, socialne in komunikacijske zmožnosti za vodenje	Student is introduced to the performance of work done by graduate in practice. Especially, students are: aware of the organizational structure and technology of building companies, familiar with the regulations about safety at work and their implementation in practice, familiar with current developments in a construction company, introduced to executive aspect of work when undertaking field work - current site, or in office - self- performed work on current project under the guidance of a mentor; they develop the use of scientific research methods in a broad spectrum of problems in the profession, develop critical

skupinskega dela, pokaže iniciativnost in samostojnost pri vodenju najzahtevnejših delovnih sistemov pod nadzorom mentorja.	reflection, social and communication skills for teamwork management, show initiative and independence in the management of most complex work systems under the supervision of mentor.
---	---

Temeljna literatura in viri/Readings:

Viri so izbrani v sodelovanju z mentorjem praktičnega usposabljanja glede na vsebine, ki so predpisane in z njimi razpolaga organizacija, ki izvaja praktično usposabljanje. /

Resources are selected in collaboration with the supervisor of practical training in relation to the contents prescribed and disposed of by the organization conducting the practical training.

Interna in druga gradiva v delovni organizaciji.

Smernice za praktično usposabljanje na Univerzi v Ljubljani. 2007. Ljubljana, UL. Dostopno na spletu.

Govekar, Okoliš et.al. 2010. Praktično usposabljanje študentov v delovnih organizacijah in primeri dobrih praks. Ljubljana, UL FF, Center za pedagoško izobraževanje.

Učno gradivo v spletni učilnici.

Cilji in kompetence:**Cilji:**

- Študent v okviru praktičnega usposabljanja spozna operativno delo v ciljnih poklicih in organizacijsko strukturo subjektov na področju gradbeništva.
- Praksa, izvedena med izobraževalnim procesom, ima tudi motivacijski cilj ter namen.
- Študent spozna dejavnike kariernega načrtovanja in razvoja in procese povezane s kariernim razvojem.
- Študentu se omogoči samoevalvacijo kompetenc in dejavnikov, ki podpirajo procese poklicne identifikacije v povezavi akademskega okolja in delovnih okolij.
- Študent spozna značilnosti učenja na delovnem mestu in značilnosti delovnih okolij ter značilnosti opazovanja in registriranja delovnih procesov.

Pridobljene kompetence:

- Obvladovanje uporabe in prenosa teoretičnih znanj, ki jih študent pridobi med študijem pri predavanjih, vajah ter seminarjih, v inženirsko prakso.
- Sposobnost za povezovanje teorije in dela v praksi.

Objectives and competences:**Objectives:**

- In the context of practical training student learns about operational work in targeted occupations and organizational structure of entities in the construction field.
- The practice during the educational process has also motivational goal and purpose.
- Students learn about the elements of career planning and development and processes related to career development.
- Student is facilitated to do self-evaluation of competences and factors that support the processes of professional identification in relation to academic environment and working environments.
- Students learn about the characteristics of workplace learning and the characteristics of working environments and the characteristics of observation of workflows.

Gained competences:

- Control of the application and transfer of theoretical knowledge acquired while studying in academic environment (lectures, tutorials and seminars) to engineering practice. Ability to integrate theory and practical work.

Predvideni študijski rezultati:**Intended learning outcomes:**

<ul style="list-style-type: none"> • Študent pridobi praktična znanja in izkušnje na področju nalog in storitev gradbene stroke. • Pridobljena znanja mu koristijo pri izdelavi magistrskega dela. • Študent se po opravljeni praksi lažje in hitreje uvaja v delo po končanem študiju, razume različne gradbene subjekte in njihovo vlogo v družbi. • Študent se na podlagi sinteze pridobljenih znanj tekom študija lahko sooči z aktualnimi delovnimi nalogami oz. uporabi aktualna znanja in pripomočke pri izpolnjevanju nalog, ki jih opravlja organizacija, v kateri poteka praktično usposabljanje. • Pridobljena znanja in spretnosti pripomorejo h kakovostnejšemu razumevanju vsebin posameznih predmetov v študijskem procesu, tudi pri izdelavi magistrskega dela, kakor tudi kasneje pri uvajanju na prvo delovno mesto. Študent zna ovrednotiti svoje delo glede na zastavljene in dosežene cilje. Strokovno delo reflektira na osnovi zbranih informacij. Študent razvija kompetence za načrtovanje lastne kariere in samoevalvacijo znanja in kompetenc. 	<ul style="list-style-type: none"> • Students will acquire practical knowledge and experience in the field of tasks and services of the construction field. • Obtained knowledge will be useful in the preparation of master thesis. • During the practice students are more efficiently introduced to the work needed after completing their studies, understand various construction entities and their role in society. • Synthesis of knowledge acquired during the study may be confronted with the actual work and tasks through the application of core knowledge and tools in fulfilling the tasks carried out by the organization in which the practical training takes place. • Knowledge and skills to help achieve higher quality of comprehension of the content of individual courses in the study process, also in the writing of master thesis, as well as later in the introduction to the first employment. • Student is able to evaluate work against the objectives and targets achieved. Professional work is reflected on the basis of the information collected. Students develop competences for career planning and self-assessment of knowledge and competencies.

Application of computer programs to solve problems encountered in engineering practice</p>
---	--

Temeljna literatura in viri/Readings:

Kladnik, R. 1983. Nestacionarni temperaturni pojavi v ovojnem sklopu zgradbe, FAGG.

Luikov, A.V. 1975. Heat and mass transfer in capillary porous bodies. Oxford, Pergamon.

Biess, D.A., Hansen, C.H. 2003. Engineering Noise Control, Theory and Practice, 3rd edition. Spon Press.

Siegel, R., Howell, J.R. 1972. Thermal Radiation Heat Transfer. McGraw-Hill.

Peternelj, J., Jagličić, Z. 2014. Osnove gradbene fizike. UL, FGG.

Cilji in kompetence:

- Cilji:
- Nadgraditi osnovno znanje nestacionarne termodinamike, zvočnih pojavov in svetlobnih pojavov z znanjem, ki je specifično za te pojave v grajenem okolju.
 - Podati poglobljeno znanje prenosa toplote z prevajanjem, konvekcijo in sevanjem, ter zvočnih in svetlobnih pojavov v gradbeništvu.
 - Podati matematične metode reševanja difuzijske in valovne enačbe z upoštevanjem robnih pogojev karakterističnih za zgradbe in druge gradbene objekte.
 - Podati pregled računalniških orodij primernih za numerično reševanje konkretnih problemov.

Pridobljene kompetence:

- Sposobnost fizikalno-matematične formulacije praktičnih problemov na teh področjih.
- Pravilna izbira matematičnega orodja.

Objectives and competences:

- Objectives:
- To expand knowledge and acquire new skills in applications of non-stationary thermodynamics, acoustics and photometry specific to buildings and urban environment. In particular this includes:
 - In-depth analysis of heat transfer via conduction, convection and radiation.
 - Sound and light effects in buildings and civil engineering in general.
 - Mathematical methods used for the solution of diffusion and wave equations subject to particular initial and boundary conditions.
 - Overview of available computer programs to solve the above problems.

Gained competences:

- Ability to formulate engineering problems using appropriate physical and mathematical methods in order to obtain quantitative results.

Predvideni študijski rezultati:

- Pridobljeno poglobljeno znanje o prenosu toplote, vlage in zvoku ter hrupu v zaprtih prostorih.

Intended learning outcomes:

- In-depth knowledge of heat and moisture transport across structural components in buildings, sound effects and noise in enclosures.

<ul style="list-style-type: none"> • Razumevanje matematičnih metod za opis in analizo fizikalnih procesov povezanih s toplotnimi in zvočnimi pojavi v zgradbah. • Osvojene računske spretnosti za analitično in numerično reševanje konkretnih problemov. • Doseženo znanje uporabljajo pri izdelavi diplomskega dela oz. v inženirski praksi. • Dobro razumevanje toplotnih in akustičnih pojavov v zgradbah je osnova za varčno rabo energije in primerno izbiro materialov za konstrukcijske sklope. • Sposobnost fizikalno-matematične formulacije procesov v ovojnem sklopu zgradbe. • Sposobnost izbire primerne matematičnega orodja za analizo praktičnih problemov. 	<ul style="list-style-type: none"> • Understanding of physical processes involved in these phenomena and ability to use appropriate mathematical methods used for their analysis. • Application of the above skills in actual solving of practical problems or for writing research proposals. • Good understanding of heat and acoustic phenomena leads to economic use of energy in buildings and, in addition, to proper choice of materials for structural components. • Ability of exact physical and mathematical formulation of processes taking place in the building envelope. Selection of appropriate mathematical methods and tools for the analysis of practical problems.
---	---

Metode poučevanja in učenja:**Learning and teaching methods:**

Predavanja, računski zgledi na vajah in uporaba prosto dostopnih računalniških programov za izračun prenosa toplote in vlage skozi konstrukcijske sklope.	Lectures and problem solving classes Application of a freely available computer programs designed for solving heat and moisture transport problems.
---	---

Načini ocenjevanja:**Delež/Weight****Assessment:**

Ustni zagovor domačih nalog	70,00 %	Oral defence of home assignments
Pisni izpit	30,00 %	Written exam

Levy, F. 2012. BIM in small-scale sustainable design. John Wiley & Sons, Inc.

Učno gradivo v spletni učilnici.

Cilji in kompetence:

Cilji:

- Pojasniti osnovne koncepte informacijskega modeliranja stavb.
- Pripraviti študente na uvajanje in uporabo informacijskih modelov stavb.
- Pripraviti študente na analize informacijskih modelov za trajnostno gradnjo stavb.

Pridobljene kompetence:

- Izdelati shemo informacijskih modelov stavb.
- Izdelati konkreten informacijski model in pridobiti ustrezne podatke.
- Uporaba informacijskih modelov stavb za vizualizacijo, dokumentacijo in analize.
- Analitično obravnavati izmenjavo informacijskih modelov in vlogo pri komunikaciji.
- Sposobnost sodelovanja z deležniki v projektu, ki temelji na informacijskih modelih stavb.

Objectives and competences:

Objectives:

- Student shall understand major concept relevant for building information modelling.
- Student shall be capable to independently plan and implement BIM on small scale projects.
- Student shall be capable to perform sustainable design and analysis based on BIM.

Gained competences:

- Understand and develop small BIM schema.
- Independently develop and evolve BIM and gain appropriate data.
- Understand and plan various BIM uses, including visualization, documentation, analysis.
- Analytically observe the exchange BIM models and their role in project communication.
- Capability to collaborate with different project stakeholders using BIM technologies.

Predvideni študijski rezultati:

- Poznavanje teoretičnih osnov in standardov za BIM.
- Poznavanje zahtev in postopkov za trajnostno projektiranje z BIM.
- Razumevanja pomena in potenciala BIM.

Intended learning outcomes:

- Theoretical background and standards for BIM.
- Special requirements and procedures for sustainable design supported by BIM.
- Importance and potential of BIM.

<ul style="list-style-type: none"> • Razumevanje kritičnih vsebin in elementov pri implementaciji BIM. • Sposobnost planiranja uporabe in implementacije BIM. • Sposobnost kritične presoje uvajanja BIM glede na zrelost sodelujočih in konkreten projekt. • Sposobnost analizirati in odpraviti ovire za interoperabilnost BIM. <p>Izdelki študentov:</p> <ul style="list-style-type: none"> • delni informacijski modeli stavb s standardno, določenimi elementi, • analize za trajnostno projektiranje na osnovi BIM, • integriran projekt BIM z vsemi bistvenimi elementi in izmenjavami modelnih vsebin. 	<ul style="list-style-type: none"> • Critical digital content and elements for successful implementation of BIM. • Planning and implementation of BIM. • BIM assessments in terms of capability and capacity for implementation on a BIM project. • Analysis of interoperability issues and the related barriers. <p>Students shall produce:</p> <ul style="list-style-type: none"> • partial BIM models with standards elements and BIM libraries, • analysis for sustainable design based on BIM, • integrated BIM project with all essential load-bearing and non-load-bearing elements.

Študijsko gradivo dostopno na: e-učilnici UL FGG

Raziskovalni laboratoriji in infrastrukturna centra. Dostopno na: <http://www.ki.si/raziskovalne-enote/I02-laboratorij-zaspektroskopijo-materialov/>.

Cilji in kompetence:

Cilji:

- Nadgraditi osnovno znanje o naprednih materialih uporabnih za doseganje toplotno-optičnih učinkov v stavbah.
- Podati pregled njihovih fizikalno-kemijskih lastnosti v povezavi z strukturo materialov.
- Nadgraditi znanje o njihovi uporabi z namenom načrtovanja večfunkcionalnih rešitev.
- Podati pregled možnih rešitev v modernih stavbah.

Pridobljene kompetence:

- Sposobnost koncipiranja toplotno-optičnih rešitev za gradbeništvo na osnovi naprednih materialov.

Objectives and competences:

Objectives:

- Upgrade basic knowledge of advanced materials which are useful for achieve thermal-optical effects in buildings.
- To give an overview of physical-chemical properties in relation to the structure of materials.
- Upgrade knowledge about their use in order to design multifunctional solution.
- To give an overview of possible solutions in modern buildings.

Gained competences:

- Ability of conception of thermo-optical solutions for construction on the basis of advanced materials.

<ul style="list-style-type: none"> • Sposobnost razpoznavanja prednosti naprednih materialov na osnovi njihovih fizikalno-kemijskih lastnosti. 	<ul style="list-style-type: none"> • Ability understanding of the benefits of advanced materials based on their physical - chemical properties.
---	--

Predvideni študijski rezultati:

- Razumevanje delovanja transparentnih delov stavbnega ovoja, zasnova in analiza vplivov direktnega osončenja in zajema dnevne svetlobe v stavbi, sposobnost ocene odziva stavbe na osončenje in dnevno svetlobo.
- Uporaba računskih metod in programske opreme za analizo obravnavanih elementov svetlobnega in (posredno) toplotnega odziva stavbe oziroma prostora.
- Sposobnost samostojne ocene položaja in vloge obravnavanih elementov v sistemu okolje/človek/stavba in identifikacija medsebojnih povezav.
- Spretnosti uporabe domače in tuje literature in drugih virov, zbiranja in interpretiranja podatkov, identifikacija.
- Reševanje problemov, kritična analiza, sinteza, delo v skupini.

Intended learning outcomes:

- Understanding the functioning of transparent constructional complexes, design and analysis of the effects of insolation and daylight in the buildings, ability to assess the building response to the insolation and daylight.
- Application of calculation methods and computer software simulations for analyse of evaluated daylight and (indirectly) also thermal response of the buildings and surroundings.
- Ability to independently evaluate the status and the role of the analysed elements in the system: environment/human/building, and identification of mutual interconnections.
- Skills for review of relevant literature sources and other references (national, international), collecting and interpreting the data, problem identification.
- Problem solving, critical analysis, synthesis, group work.

Metode poučevanja in učenja:

Predavanja, laboratorijske vaje.

Learning and teaching methods:

Področna zakonodaja.

Študijsko gradivo dostopno na: e-učilnici UL FGG.

Cilji in kompetence:

- Cilji:
- Regulacija porabe toplotne energije za ogrevanje.
 - Regulacija porabe toplotne energije za hlajenje.
 - Upoštevanje vplivov oblike stavbe, orientacije in geometrije na porabo energije.
 - Vpliv strukture zunanega ovoja na varčno rabo energije.
 - Izkoriščanjem obnovljivih virov energije v grajenem okolju.

Pridobljene kompetence:

- Obvladanje projektiranja in dimenzioniranja toplotne zaščite in zaščite pred pregrevanjem.
- Sposobnost uporabe predpisov in standardov s tega področja.
- Sposobnost uporabe ustrezne programske opreme za optimizacijo na ravni stavbe in njenega ovoja.

Objectives and competences:

- Objectives:
- The objective of the course is to regulate heating energy consumption.
 - The objective of the course is to regulate cooling energy consumption.
 - The influence of building shape, orientation, geometry and envelope structure on the energy consumption is studied.
 - Final objective is to enable efficient energy use and utilization of renewable energy sources in the built environment.

Gained competences:

- Students will master the design process with regard to thermal protection and protection of overheating of buildings.
- They will be able to use relevant rules and standards.
- They will be able to use as appropriate software tools for the optimization of energy

	performance of the entire building as well as its components.
--	---

Predvideni študijski rezultati:

- Sposobnost identifikacije vplivnih faktorjev, ki oblikujejo toplotni odziv stavbe in njenih konstrukcijskih sklopov z uporabo sodobnih metod načrtovanja, dimenzioniranja, izbora tehnologij in materialov. Razumevanje povezav med njimi in stopnje njihovih pomembnosti.
- Učinkovita koordinacija razpoložljivih materialov in tehnologij v stavbi, ki vplivajo na porabo toplotne energije.
- Sposobnost samostojne ocene položaja in vloge obravnavnih elementov v sistemu okolje/človek/stavba in identifikacija medsebojnih povezav. Spretnosti uporabe domače in tuje literature in drugih virov.
- Zbiranja in interpretiranja podatkov.
- Identifikacija in reševanje problemov, kritična analiza, sinteza, delo v skupini.

Intended learning outcomes:

- Ability to identify influential factors that shape the thermal response of the building and its constructional complexes using modern methods of design, dimensioning, choice of technologies and materials.
- Understanding the links between them and their relative level of importance.
- Effective coordination between available materials and technologies in the building, which affect the use of heating energy.
- Ability to assess the situation and the role of individual elements in the environment / man / building system, as well as identification of interrelations.
- Ability to use national and international relevant literature and other sources.
- Collecting and interpreting data.
- Identification of problems and their solving, critical analysis, synthesis, group work.

Metode poučevanja in učenja:

Predavanja, laboratorijske vaje in seminarske vaje. Projektni pristop.

Learning and teaching methods:

Lectures, laboratory exercises and seminar exercises. Project oriented approach.

Liddament, M.V. 1996. A guide to energy efficient ventilation, AIC-TN vent guide.

Regulation (EU) No 305/2011 of the European Parliament and of the Council of 9 March 2011 laying down harmonised conditions for the marketing of construction products and repealing Council Directive (89/106/EEC).

e-učilnica Katedre za stavbe in konstrukcijske elemente na spletu: <http://kske.fgg.uni-lj.si>

Cilji in kompetence:

Cilji:

- Izboljšanje kakovosti grajenega okolja.
- Zmanjševanje negativnih vplivov na zunanje okolje.
- Učinkovita izraba virov.
- Zagotavljanje zdravega notranjega okolja za prebivalce.

Pridobljene kompetence:

- Pozna faktorje, ki vplivajo na bivalno in delovno okolje.
- Razume procese delovanja posameznih vplivnih faktorjev in njihovo interaktivnost.
- Sposoben je uporabljati računske metode in programsko opremo za področje oblikovanja notranjega okolja.
- Obvlada prenos sistema zunanje okolje-ovoj-notranje okolje človek v konceptualizacijo realne stavbe (navezovanje na ostale gradbeno-fizikalne vplive).

Objectives and competences:

Objectives:

- The main objectives of the course are to improve the quality of the built environment
- Minimization of negative impacts on the environment.
- Efficient use of natural resources.
- Providing healthy indoor environment for building occupants.

Gained competences:

- Student is familiar with influencing factors inside living and working environment.
- He understands the interactive impacts of defined influencing factors.
- He is able to use calculation methods and computer software for the design of healthy and comfort indoor environment.
- He masters the transfer between analysed systems: "outdoor environment- building envelope-indoor environment-human wellbeing" (in the framework of conceptualization of specific building case; link to other parameters of building physics).

Predvideni študijski rezultati:

- Razumevanje delovanja posameznih vplivnih faktorjev notranjega okolja na počutje in zdravje

Intended learning outcomes:

- Understanding the functioning of the influencing factors of the internal environment

<p>uporabnikov, sposobnost ocene odziva stavbe in uporabnikov na uporabljene ukrepe.</p> <ul style="list-style-type: none"> • Uporaba računskih metod in programske opreme za analizo obravnavanih elementov kvalitete notranjega okolja. • Sposobnost samostojne ocene položaja in vloge obravnavanih elementov v sistemu okolje/človek/stavba. • Identifikacija medsebojnih povezav v sistemu okolje/človek/stavba. • Spretnosti uporabe domače in tuje literature in drugih virov. • Zbiranja in interpretiranja podatkov. • Identifikacija in reševanje problemov, kritična analiza, sinteza, delo v skupini. 	<p>on user health and comfort, the ability to evaluate the building and user response on the implemented measures.</p> <ul style="list-style-type: none"> • Application of calculation methods and computer software to analyse the evaluated elements of the indoor environmental quality. • Ability to evaluate the status and role of analysed elements in the system "environment/human/building". • Identification of connections in the system "environment/human/building". • Skills for the review of relevant literature sources and other references (national, international). • Collecting and interpreting the data. • Problem identification, problem solving, critical analysis, synthesis, team work.

Temeljna literatura in viri/Readings:

Škrjanc, I. 2012. Avtomatsko vodenje sistemov. UL, FE. (skripta v pripravi)

Zupančič, B. 1996. Zvezni regulacijski sistemi 1. del, 3. Izdaja. UL, FE.

Zupančič, B., Karba, R., Matko, D. 1995. simulacija dinamičnih sistemov, 1.izdaja. UL, FE.

Karba, R. 1999. Modeliranje procesov, 1. Izdaja. UL, FE.

Oblak, R., Škrjanc, I. 2005. Matlab s simulinkom : priročnik za laboratorijske vaje, 1. izdaja. UL FE.

Cilji in kompetence:

Cilji:

- Prikaz področja avtomatike na zanimiv način preko številnih primerov.
- Seznanitev s celovitostjo življenjskega cikla sistemov vodenja.
- Poudarek na sistemskem pristopu.

Pridobljene kompetence:

- Osvojitev osnovnih metod modeliranja in simulacije sistemov.
- Osvojitev osnovnih metod avtomatskega vodenja s poudarkom na regulacijskih metodah.
- Seznanitev s celovitostjo obravnavanih postopkov s pomočjo primerov iz gradbeništva.

Objectives and competences:

Objectives:

- Introduction to the field of automatic control using interesting case examples.
- Introduction to control life-cycles.
- Emphasis on systems approach.

Gained competences:

- Mastering basic methods of system modelling and simulation.
- Mastering basic principles of automatic control with emphasis on control methods.
- Introduction to the integrity of presented procedures using examples from civil engineering.

Predvideni študijski rezultati:

- Osnovna znanja iz modeliranja, simulacij in avtomatskega vodenja pretežno zveznih dinamičnih procesov, kot so procesi ogrevanja in osvetljevanja v zgradbah.
- Znanja bodo pridobljena in demonstrirana ob številnih primerih, kar bo poudarilo uporabnostno komponento.

Intended learning outcomes:

- Basic knowledge in modelling, simulation and automatic control of mainly continuous dynamic processes, such as heating and lighting processes in buildings.
- The assessment and demonstration of the knowledge will be based on various case

<ul style="list-style-type: none"> • Poglobljeno razmišljanje s pomočjo systemskega pristopa, ki je vodilo pri obravnavi, omogoča uporabo obravnavanih pristopov na podoben način tudi pri drugačnih problemih. • Systemski pristop pri reševanju problemov. Modeliranje in simulacija bosta podana na način, ki bo demonstriran pretežno s problemi v gradbeništvu, vendar bo uporabnost dosti širša. • Metode vodenja bodo prav tako širše uporabne. Spoznana računalniška orodja za modeliranje, simulacijo in vodenje bodo gotovo uporabna tudi pri drugih predmetih. 	<p>examples, emphasising its usability and applicability.</p> <ul style="list-style-type: none"> • Concepts of in-depth thinking based on systems approach, allowing the use of the presented concepts in similar manner also on other areas. • Systems approach to problem solving. The methods of modelling and simulation will be presented using different examples from civil engineering, but with broader applicability. • Similarly, the presented methods of systems control are also useful in a wider field of application. Presented software tools for modelling, simulation and control are useful for different lectures as well.

Vsebina:

Content (Syllabus outline):

Cilj predmeta je seznaniti študente s principi okoljskega in trajnostnega inženirskega načrtovanja, oblikovanja in sistemskega pristopa k reševanju problemov in obvladovanju iterativnih postopkov razvoja od abstraktne zamisli do konkretne rešitve konstrukcijskih sklopov, kot tudi stavb kot celote, in obratno.

Pri predmetu študent spozna postopke vrednotenja trajnostne gradnje, okoljskega vrednotenja stavbe kot celote, pravilne izbire gradiv in posledično sestavljanje konstrukcijskih sklopov in naprav, spozna dejavnike tveganja, napačne izbire gradiv ali neustrezne kombinacije materialov v poljubnem

The aim of the course is to acquaint students with principles of environmental and sustainable engineering planning, design and systematic approach to problem solving and management of iterative development processes from abstract ideas to concrete solutions of structural components, as well as the buildings as a whole, and vice versa.

The students learn about the processes of evaluating sustainable construction, environmental evaluation of the building as a whole, the correct selection of materials and the resulting assembly of structural assemblies and devices, learn about risk factors, the wrong choice of materials or inappropriate

<p>konstrukcijskem sklopu ali stavbi. Pri tem pa upošteva vse parametre celovitega načrtovanja in zahteve za inženirsko načrtovanje stavb. V sklopu laboratorijskih vaj študenti opravljajo izračune z ustrezno računalniško opremo.</p> <p>Predavanja:</p> <ul style="list-style-type: none"> • Argumenti ekonomičnosti • Argumenti vpliva na okolje • Študija možnosti in izvršljivosti • EKO minimalizem • Vsebovana energija • CO2 ekvivalent • Trajnostnost • Kakovost • Življenjska doba • Trajnost materialov • Določevanje življenjske dobe, določevanje trajnosti • Lokacija stavbe in transporti do mesta vgradnje • Izbira okoljsko primernih gradiv in koncipiranje razvoja ustreznih konstrukcijskih sklopov in celotnih stavb, • Pregled testnih metod za ugotavljanje obstojnosti materialov (pospešeni testi staranja) • Ogljični odtis, potencial globalnega segrevanja 	<p>combinations of materials in any structural elements. Taking into account all the parameters of a comprehensive design and engineering requirements for the design of buildings. As a part of laboratory exercises students perform calculations using appropriate computer software.</p> <p>Lectures:</p> <ul style="list-style-type: none"> • Arguments economy • Arguments impact on the environment • Study possibilities and enforceability • ECO minimalism • The energy content • CO2 equivalent • Sustainability • Quality • Life span • Durability of materials • Determination of service life determination of sustainability • Location of the building and transportation to the installation location • Choosing environmentally preferable materials, and devising the development of advanced structural components, • Review of test methods for determining the durability of materials (accelerated aging tests) • Carbon footprint, global warming potential

Študijsko gradivo dostopno na: e-učilnici UL FGG.

Cilji in kompetence:

Cilji:

- Nadgraditi osnovno znanje o izbiri materialov, konstrukcijskih sklopov, kot tudi stavb kot celote v pogledu trajnostne gradnje, zmanjševanju vpliva na okolje in analizi v celotnem življenjskem ciklusu stavb in drugih objektov,
- Nadgraditi znanje z metodami, teoretičnimi in praktičnimi rešitvami, z namenom okoljsko

Objectives and competences:

Objectives:

- To upgrade the basic knowledge about choice of materials, structural assemblies, as well as the buildings as a whole in the context of sustainable construction, reducing the impact on the environment and analysis throughout the life cycle of buildings and other structures.

<p>samovzdržnega načrtovanja, s čim manjšim vplivom na okolje.</p> <ul style="list-style-type: none"> Podati pregled naprednih metod in načinov ugotavljanja in dokazovanja vplivov na okolje, tako v procesu proizvodnje (pridobivanja surovin, predelave, proizvodnje, same vgradnje gradiv in gradnje objektov, vključno z vsemi transporti), uporabe (potrebne energije za vzdrževanje stavbe, obnove, sanacije in druga popravila) in konca uporabe (odstranjevanje in dekompozicija objektov, možnost ponovne uporabe, recikliranja in deponiranja). <p>Pridobljene kompetence:</p> <ul style="list-style-type: none"> Sposobnost izbire gradiv v procesu načrtovanja objektov s ciljem čim manjšega vpliva na okolje, ob istočasnem upoštevanju vplivov v celotnem življenjskem ciklusu stavb in drugih objektov, Nadgraditi vsa do sedaj pridobljena znanja s področja stavbarstva z znanji okoljsko vzdržne gradnje in uporabe objektov v celotni življenjski dobi, Sposobnost razpoznavanja prednosti okoljske gradnje in uporabe objektov. 	<ul style="list-style-type: none"> To upgrade the knowledge of methods, theoretical and practical solutions in order to sustainable environmental planning, with minimum impact on the environment. To give an overview of advanced methods and ways of identifying and proving the impact on the environment, both in the production process (extraction, processing, production, installation of materials and construction of buildings as a whole, including all transports) and use (energy required for building maintenance, renovation, rehabilitation and other repairs) and end use (remove and decomposition of objects and its parts, re-use, recycling). <p>Acquired competences:</p> <ul style="list-style-type: none"> Ability to choose materials in the design process of buildings with a view to minimize the impact on the environment, taking into account all impacts throughout the lifecycle of buildings and other structures, Upgrade all acquired knowledge in the field of architecture with the skills of environmentally sustainable construction and use of buildings throughout its lifetime, Ability to recognize environmental benefits of the construction and use of buildings.
---	--

Predvideni študijski rezultati:

- Sposobnost koncipiranja rešitev v pogledu varovanja okolja in zniževanja vplivov na okolje.
- Študent s svojim znanjem in izkušnjami postane konkurenčen na trgu strokovnega, raziskovalno - razvojnega in znanstvenega področja, s poudarkom na grajenem okolju.

Intended learning outcomes:

- Ability to create a solution in view of protecting the environment and reducing environmental impacts on the environment.
- Students got knowledge and experience to become competitive in the professional market, research - development and scientific fields, with a focus on the built environment.

Metode poučevanja in učenja:

Predavanja, seminarske naloge, laboratorijske vaje, domače naloge.

Learning and teaching methods:

Lectures, tutorials, consultations, homework.

Načini ocenjevanja:**Delež/Weight****Assessment:**

Študijsko gradivo dostopno na: e-učilnici UL FGG

Cilji in kompetence:

Cilji:

- Izboljšanje kakovosti bivalnega in delovnega okolja z razumno uporabo novih tehnologij in minimalno porabo energije za delovanje sistema.
- Optimalna komunikacija z drugimi strokami in enakopravno sodelovanje s svojimi kompetencami z njimi.
- Vodenja sistemov načrtovanja in gradnje, kjer se bo v praksi pojavil skupaj z arhitektom.

Pridobljene kompetence:

- Obvladanje osnovnih principov inženirskega načrtovanja.
- Obvladanje postopka systemske in faktorske analize.
- Sposobnost uporabe različnih orodij za analizo in načrtovanje stavb.

Objectives and competences:

Objectives:

- The main objectives of the course are to improve the quality of the living and working environment with the rational use of new technologies and minimal use of energy for system operation.
- Optimal communication with other experts with equal participation in their own field of competences.
- Being able to design the framework of control systems of buildings.
- Working in coordination with architect.

Gained competences:

- Mastering the basic principles of engineering design, mastering the processes of system analysis and factor analysis.

<ul style="list-style-type: none"> • Sposobnost uporabe literature in kritične presoje produktov razvoja stroke. • Sposobnost upoštevati tekočo zakonodajo in standarde. 	<ul style="list-style-type: none"> • Ability to use calculation methods and computer software in the process of building design. • Ability to use relevant literature with critical evaluation of available products. • Getting familiar with current legislation from relevant filed.
--	---

Predvideni študijski rezultati:

<ul style="list-style-type: none"> • Sposobnost identifikacije vplivnih faktorjev, ki oblikujejo dinamično in sonaravno bivalno okolje z razumno uporabo razpoložljivih tehnologij. Razumevanje povezav med njimi in stopnje njihovih pomembnosti. • Učinkovita koordinacija različnih strokovnih področij, ki se pojavljajo pri načrtovanju in gradnji stavb in aktivno sodelovanju na delu, ki ga pokrivajo gradbeniške intervencije. • Sposobnost samostojne ocene položaja in vloge obravnavnih elementov v sistemu okolje/človek/stavba in identifikacija medsebojnih povezav. • Spretnosti uporabe domače in tuje literature in drugih virov. • Zbiranja in interpretiranja podatkov. • Identifikacija in reševanje problemov, kritična analiza, sinteza, delo v skupini. 	Intended learning outcomes: <ul style="list-style-type: none"> • Ability to identify the influencing factors for the design of dynamic and sustainable living environment with rational use of new technologies. Understanding the interconnections among them and the level of individual importance. • Efficient coordination of various fields influencing the design of buildings and construction, active participation in implementation of interventions. • Ability to evaluate the status and the role of elements in the "environment/human/building" system, identification of interconnections between them. • Skills for review of relevant literature sources and other references (national, international). • Collecting and interpreting the data. • Identification and solving of problems, critical analysis, synthesis, group work.
---	---

Metode poučevanja in učenja:

Predavanja, laboratorijske vaje in seminarske vaje. Projektni pristop.	Learning and teaching methods: Lectures, laboratory exercises and seminar exercises. Project oriented approach.

Temeljna literatura in viri/Readings:

Literatura s področja vsebine diplomskega dela.

T. Koler-Povh, G. Turk: Navodila za oblikovanje visokošolskih del na FGG in navajanje virov, FGG UL, Ljubljana, 2011, 39 strani, priloge. Dostopno na:

http://www3.fgg.uni-lj.si/fileadmin/user_upload/UL_FGG_-_Pr_10_Navodila_za_oblikovanje_visokosolskih_del_na_UL_FGG_2011_07.pdf

Literature from the field of the contents of the thesis.

Instructions for creating higher part of the Faculty of Civil and Geodetic Engineering and citation of sources.

Cilji in kompetence:

Cilji:

- Uporabiti pridobljena znanja v poglobljenem študiju na temi magistrskega dela.
- Pod mentorstvom izdelati koncept dela, v katerem so opredeljeni namen, cilji, metode in viri za izdelavo tega dela.
- Razvijanje samostojnega, kritičnega in etičnega načina dela.

Pridobljene kompetence:

- Sposobnost samostojnega načrtovalskega in raziskovalnega dela.
- Sposobnost izdelave celovite in zaključene projektne in/ali raziskovalne naloge.
- Z javno predstavitvijo magistrskega dela pridobiti komunikacijske spretnosti in sposobnosti.

Objectives and competences:

Objectives:

- To use the knowledge gained by in-depth study on the thesis topic.
- Under supervisor's supervision student prepares a concept, where the purposes, goals, methods and references for the thesis are presented.
- To develop independent, critical and ethical way of working.

Gained competences:

- Ability to independent research and design.
- Ability to produce report about the executed design and/or research task.
- With public presentation student obtains communication skills and abilities.

Predvideni študijski rezultati:

- Pridobi znanja na vseh fazah, ki so del samostojnega reševanja konkretnih problemov in nalog na področju stavbarstva, sodelovanja in tudi skupinskega dela v okviru različnih subjektov na področju stavbarstva.
- Razume stavbarstvo kot interdisciplinarno panogo, vezano na ostale naravoslovne in tehniške vede in na okolje.
- Uporaba doseženega znanja v inženirski praksi.

Intended learning outcomes:

- Students acquire knowledge in all phases, which are part of a real problem and tasks in buildings, as well as cooperation and teamwork within various entities in the area of buildings.
- They understand the interdisciplinary of this area.
- They learn how to use the theoretical knowledge in engineering practice.
- Use of theoretical knowledge in practice.

Cilji in kompetence:**Cilji:**

- Podati osnove razumevanja in poznavanja notranjega okolja stavb (toplotno okolje, kakovost zraka) v korelaciji z uporabnikom prostora in strojnimi instalacijami.
- Podati osnove povezave prostorske umeščenosti uporabnika prostora – človeka (npr. delovno okolje) z vrednotenjem notranjega okolja na podlagi osnovnih tehničnih zakonitosti in strojnimi instalacijami.
- Podati osnovne tehnologije in osnove (sistemov) ogrevanja, prezračevanja in klimatizacije (hlajenja) (OPK) ter sistemov za pripravo tople vode.
- Podati teoretične osnove regulacije OPK sistemov.

Pridobljene kompetence:

- Pridobljena znanja bodo omogočila, da bo študent:
- Sposoben oceniti in osnovno načrtovati delovno in bivalno notranje okolje (toplotno okolje,

Objectives and competences:**Objectives:**

- The main objective of this course is to make student understand the fundamentals of indoor environment in buildings (thermal environment and air quality) in correlation with the occupants and engineering installations.
- To explain the fundamental relations of the occupant's position in a room (e.g. working environment) with indoor environment evaluation considering the fundamental technical requirements and engineering installations.
- To explain the basics of technologies and heating, ventilation and air-conditioning systems as well as the fundamentals of hot water systems.
- To explain the theoretical fundamentals of the HVAC system regulation.

Gained competences:

- Ability to estimate and prepare basic design of working and living environment (thermal

<p>kakovost zraka) s predvidenim tveganjem za ugodje in zdravje uporabnika prostora,</p> <ul style="list-style-type: none"> • Sposoben osnovnega modeliranja parametrov notranjega okolja, • Sposoben prepoznati različne osnovne ogrevalne, prezračevalne in klimatske sisteme in sisteme za pripravo tople vode. 	<p>environment, air-quality) with foreseen risk for the occupant's comfort and health risk.</p> <ul style="list-style-type: none"> • Ability of basic modelling of the indoor environment parameters. • Ability to identify different heating, ventilation and air-conditioning systems and hot water systems.
--	--

Predvideni študijski rezultati:**Intended learning outcomes:**

<ul style="list-style-type: none"> • Sposobnost razumevanja notranjega okolja v korelaciji z uporabnikom prostora in s tem povezanega delovanja OPK sistemov. • Uporaba pridobljenih znanj pri osnovnih analizah ocenjevanja notranjega okolja in ustreznosti vgrajenih OPK v inženirski praksi. • Pridobljena znanja so izjemno potrebna pri gradbenem inženirstvu. • Sposobnost logičnega razmišljanja in ustrezen inženirski pristop, ki vodi v kakovostno gradbeno aplikacijo. • Uporaba ustrezne literature, zbiranje in interpretacija podatkov, delna kritična analiza. • Sposobnost upoštevanja dinamike procesov pri načrtovanju in uporabi računalniških programov. 	<ul style="list-style-type: none"> • Ability to understanding the indoor environment in correlation with occupants and HVAC system operating. • Application of acquired knowledge at fundamental indoor environment analysis and assessments and suitability of built-in HVAC systems. • Ability to think logically and take appropriate engineering approach which leads to high-quality application. • Using corresponding literature, collecting and interpreting data, critical analysis. • Ability to take into consideration the processes of dynamics at the planning and use of computers programs.

Content (Syllabus outline):

Predavanja:

Razvoj digitalne tehnologije je tisti faktor, ki najmočneje spreminja načine in vzorce dela v poklicih, ki oblikujejo grajeno okolje. Spremembe se dogajajo na štirih frontah. Prva je vedno večja računska moč, ki vodi k vedno bolj vernim simulacijam tako naravnih pojavov kot človeške inteligence. Računalniki zmagujejo v šahu, vozijo avtomobile, pišejo poročila o športnih dogodkih ... Zakaj ne bi v bodočnosti projektirali stavb? Druga so

The advances in digital technology are the factor that is most strongly changing kinds and types of work in occupations working on the built environment. Changes are occurring on four fronts. The first is the increasing computing power, leading to a more faithful simulation of natural phenomena and artificial intelligence. Computers are winning at chess, driving cars, writing reports on sporting events ... Why not design buildings? The second is increasingly structured information. Engineers no longer draw line drawings, but build content-rich

<p>vedno boljše strukturirane informacije. Inženirji več ne rišejo črtnih risb, ampak gradijo vsebinsko bogate informacijske "BIM" modele in izdelujejo fotorealistične simulacije. Bo to omejilo ali razširilo ustvarjalnost? Tretja fronta je vedno boljše komuniciranje med ljudmi. Primeri tega so družabna omrežja in internet. Četrta fronta je prodor informacijske tehnologije v neračunalniško okolje skozi senzorje, kamere in podobno.</p> <p>Zaradi vsega tega se bistveno spreminja način projektiranja. Od lokalnega sodelovanja okrog risb prehajamo na globalno sodelovanje okrog digitalnih informacij.</p> <p>Cilj predavanj je posredovati teorije in koncepte, ki bodo osnova za vseživljensko učenje, ki bo potrebno o novih tehnologijah.</p> <p>Cilj vaj je posredovati praktično znanje pri uporabi programov in spletnih storitev za sodelovanje na računalniških platformah – torej za učinkovito komuniciranje, koordinacijo, ustvarjanje, izmenjavo in deljenje informacij.</p> <p>Vaje tečejo projektno v povezavi s katerim od strokovnih predmetov.</p>	<p>information "BIM" model and produce realistic simulations. Will this limit or augment creativity? The Third front is improved communication between people. Examples of this are the social networks and the Internet. The fourth front is the penetration of information technology in physical environment through sensors, cameras and the like.</p> <p>All this significantly changes the way we design.</p> <p>From local participation around drawings we are transitioning to a global collaboration around digital information.</p> <p>The aim of the lectures is to provide theories and concepts that will form the basis for lifelong learning, which will be on new technologies.</p> <p>The aim of the exercises is to provide practical knowledge in the use of programs and online services for collaboration on computing platforms - thus for effective communication, coordination, creation, exchange and dissemination of information.</p> <p>Exercises running the project in conjunction with one of the technical courses.</p>

Cilji in kompetence:

Objectives and competences:

<p>Cilji:</p> <ul style="list-style-type: none"> • Spoznati pomen računalniške tehnologije kot povezovalnega gradnika v gradbeni industrije in v procesih, ki v tej industriji potekajo. • Spoznati osnovno teoretično in tehnološko ozadje. • Poglobiti razumevanje o neposrednih in strateških vidikih informatizacije v gradbeništvu. • Postaviti okvir za gradbeno informatiko, ki ga v toku študija dopolnjujejo bolj specialni predmeti. 	<p>Objectives:</p> <ul style="list-style-type: none"> • Understand the importance of information technology as an integrating element among the entities of the construction industry and its processes. • Learn about basic theoretical and technological backgrounds. • Deepen the understanding of the direct and strategic aspects of informatization in construction.
--	---

<ul style="list-style-type: none"> Razumeti vlogo poklica »specialista-gradbenega-informatika« za gradbeno industrijo in karierne priložnosti. <p>Pridobljene kompetence:</p> <ul style="list-style-type: none"> Sposobnost strateškega in kritičnega razmišljanja o uporabi informacijskih tehnologij v gradbeništvu. Sposobnost uporabe praktičnih tehnoloških rešitev – lokalnih programov in storitev na internetu. 	<ul style="list-style-type: none"> Establish a conceptual framework of themes and topics of construction informatics, which will be expanded by other courses Understand the importance of professions in which engineers specialize in IT knowledge and see it a career opportunity. <p>Gained competences:</p> <ul style="list-style-type: none"> Ability of strategic and critical thinking about the use of information technology in construction. Ability to use technological solutions, local software and services on the internet.
--	--

Predvideni študijski rezultati:

<ul style="list-style-type: none"> Vloga informatike v družbi nasploh in v gradbeništvu posebej. Pregled nad temami gradbene informatike. Strateški vidiki informatizacije na področju gradbeništvu. Razumevanje znanstvenih metod dela v gradbeni informatiki. Raba ključnih orodij za delo in učenje na daljavo. Uporaba znanstvenih metode pri informatizaciji procesov v gradbeništvu. Kritična analiza uporabe IKT v gradbeništvu. Sposobnost uporabiti metode znanstvenega dela v okviru gradbene informatike tudi na druga področja. Sposobnost strateškega uvajanja informacijskih tehnologij v gospodarstvo. Sposobnost organiziranja IKT podpore projektom. Sposobnost postati informacijski manager projekta. Sposobnost sodelovati v softverskih projektih. 	<p>Intended learning outcomes:</p> <ul style="list-style-type: none"> The role of information technology in society in general and in construction in particular. Overview of the topics of construction informatics. Strategic aspects of information in the field of construction. Understanding of scientific methods in construction informatics. Use of key tools for distance working and distance learning. Use of key tools for the three kinds of integration (information-knowledge, process, communication). Critical analysis of the use of ICT in construction Ability of systematic analysis of the use of information technologies. Ability to organize ICT project support. Ability to become an IT manager (CIO) of a project, BIM manager of a project. Ability to be involved in software development projects.
---	--

Metode poučevanja in učenja:

<p>Predavanja, obogatena z multimedijskimi vsebinami in demonstracijami. Projektno organizirane vaje, kjer se delo usmerja v enovit projektni rezultat. Samostojno delo doma s korekturami v šoli.</p>	<p>Learning and teaching methods:</p> <p>Lectures enriched with multimedia and demos. Project oriented exercises focused into a unified project result. Work at home with consultations</p>
--	--

Načini ocenjevanja:**Delež/Weight Assessment:**

Teoretično znanje na izpitu	40,00 %	Theoretical exam
Sodelovanje na vajah in predavanjih	20,00 %	Activity and collaboration
Projekt in izdelek	40,00 %	Project work quality

Berčič, H. et al. 2007. Šport v obdobju zrelosti. Fakulteta za šport UL, Inštitut za šport, 240 str.

Škof, B., Zabukovec V., Boben, D., Cecič Erpič S., 2005. Pedagoško-sociološki vidiki športne vzgoje. Ljubljana, Fakulteta za šport UL, Inštitut za kineziologijo, 237 str.

Cilji in kompetence:

Cilji

- odpravljanje in preprečevanje posledic pomanjkanja gibanja oz. skrb za izboljšanje psihofizičnih sposobnosti, krepitev zdravja in ustvarjalno izrabo prostega časa.
- ozaveščanje o vrednotah športa in preko tega vplivanje na oblikovanje pozitivnih stališč do športa in navajanje na zdrav način življenja
- izpopolnjevanje znanja v izbrani športnih panogah
- oblikovanje trajnega aktivnega odnosa do športa kot kompenzacijske dejavnosti k študiju in delu

Kompetence

- oblikovanje trajnega pozitivnega odnosa do športne dejavnosti in trajne skrbi za ohranjanje zdravja in delovnih sposobnosti,

Objectives and competences:

Objectives

- care for improving psychophysical abilities, health strength and creative use of free time
- raising awareness about the values of sports, encouraging a positive attitude to sports and healthy way of lifestyle
- perfecting knowledge in selected sports
- encouraging positive attitude to sport as a compensatory activity to study and work

Competences

- formed positive attitude towards sports activities and permanent concern for the preservation of health and working ability.
- rational incorporation of sports into lifestyle,
- understand the concern for a healthy lifestyle through sports and physical activity,

<ul style="list-style-type: none"> • racionalno vgrajevanje športa v način življenja, • sposobnost samostojne skrbi za zdrav način življenja skozi športno-gibalno aktivnost, • pripravljenost in sposobnost samostojnega vključevanja v organizirane ali neorganizirane oblike športnega udejstvovanja v novih študijskih ali delovnih okoljih, • promocija in uveljavljanje fakultete in univerze. 	<ul style="list-style-type: none"> • readiness and ability of self-depended inclusion in organized or non-organized forms of sports in the new study or work environments, • promotion and recognition of the Faculty and University.
--	---

Predvideni študijski rezultati:

<ul style="list-style-type: none"> • razumevanje temeljnih pojmov in teorij delovanja človekovega gibalnega, srčno žilnega in dihalnega sistema ter njihovih najpogostejših patologij • oblikovanje razumskega in čustvenega odnosa do telesnega napora, poznavanje teorije aktivnega počitka in metod za regeneracijo telesa, poznavanje zdravega prehranjevanja in regulacije telesne teže. Izpopolnitev znanja izbranih športnih zvrsti • uporaba pridobljenih znanj in vedenj v vsakodnevem življenju za kompenzacijo negativnih učinkov enostranskih obremenitev v času študija • skozi pridobljena znanja in vedenja zagotovitev večje kvalitete življenja in večje učinkovitosti pri študiju in delu • psihofizična pripravljenost organizma je pogoj za reševanje vsakodnevnih obveznosti in nalog.
--

Intended learning outcomes:

<ul style="list-style-type: none"> • understanding the basic concepts and theories of human locomotion, cardiovascular and respiratory systems and their most frequent pathologies in relation to mental health • creation of rational and emotional attitude toward physical effort, knowledge of the theory of active rest and methods for body regeneration, knowledge of healthy diet and body weight regulation, • improvement of knowledge in selected sport. Use of acquired knowledge and skills in daily life to compensate daily stresses and negative effects of unilateral load during the study, • through the acquired knowledge and behaviour increased quality of life and increased efficiency of study and work are ensured, • good psychophysical preparedness is a condition to solve everyday duties and obligations.

Metode poučevanja in učenja:

<p>Pouk se izvaja v pokritih športnih objektih in v naravi v obliki predavanj in vaj, skupinskih in individualnih konzultacij kontinuirano preko celega semestra, pa tudi v zgoščenih (kurznih) oblikah, vendar z enakim fondom ur, pri čemer se večji del teorije podaja skozi praktične vaje.</p> <p>Uporablja se naslednje učne oblike: frontalna, individualna, delo v manjših skupinah.</p>
--

Learning and teaching methods:

<p>Activities are implemented in indoor sports facilities and the natural environment in the form of lectures and exercises, group and individual consultations through the whole semester as well as in concentrated forms, major part of theory is performed through practical exercises.</p> <p>Learning forms: frontal, individual, small group work.</p>

Načini ocenjevanja:**Delež/Weight****Assessment:**

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Prerequisites:

Opravljen izpit Osnove zdravstvene hidrotehnike BA GR-UNI ali BA VOI oz. osvojena ustrezna primerljiva znanja. Ustreznost oziroma primerljivost znanj oceni nosilec oziroma izvajalec predmeta.

Finished course in Basics of sanitary engineering of the study programme BA GR-UNI or BA VOI or equivalent. The equivalency of student's prior knowledge is assessed by the course lecturer.

Vsebina:

Content (Syllabus outline):

Predavanja:

V okviru tega predmeta so prikazani najnovejši pristopi/koncepti za ravnanje z viri (voda-hrana-energija) v stavbah in na nivoju naselij.

Lectures:

The lectures will present the latest concepts for resources (water-food-energy) management in buildings and neighbourhoods.

1. The need for change in water, food and energy management in cities. Impact of

<p>1. Zakaj je potrebna sprememba pri ravnanju z vodo, hrano in energijo. Vpliv urbanega okolja/mest na stanje naravnih virov: metabolizem mest.</p> <p>2. Prevladujoči koncepti ravnanja z naravnimi viri v mestih, lastnosti linearne (vodne) infrastrukture.</p> <p>3. Značilnosti pitne in odpadne vode. Osnovni pojmi za vrednotenje masnih tokov: voda in hranila.</p> <p>4. Zasnova decentralizacije urbane vodne infrastrukture: pomen, prednosti in težave. Paradigma rabe brez odpadkov. Integracija in povezava vodne in zelene infrastrukture.</p> <p>5. Primerne tehnologije za obnovo in ponovno rabo virov: voda, hranila, energija v stavbah.</p> <p>6. Primernost objektov za implementacijo 'zapiranja snovnih tokov'. Ločevanje na viru v stavbah: siva in črna voda.</p> <p>7. Možnosti za ponovno rabo vode in hranil v stavbah: urbano kmetijstvo, zelene strehe in stene.</p> <p>8. Celovite rešitve.</p> <p>Seminar:</p> <p>Študentje izberejo določen objekt (hiša, hotel, industrijsko poslopje) ali skupino objektov in naredijo zasnovo za zbiranje, obdelavo in ponovno rabo vode in/ali hranil in/ali energije oz. zasnovo, ki pelje k čimboljšem zapiranju snovnih tokov.</p>	<p>agglomerations/cities on resources: urban metabolism.</p> <p>2. Conventional concepts for resources management in cities; characteristics of linear (water) infrastructure.</p> <p>3. Characterisation of drinking and waste water. Basics for evaluation of mass flows: water and nutrients.</p> <p>4. Decentralized concepts for urban water management: significance, benefits and obstacles. Zero waste paradigm. Integration of blue and green infrastructures.</p> <p>5. Appropriate technologies for resources recovery and reuse: water, nutrients, energy in buildings.</p> <p>6. Buildings: feasibility for implementation of closed-loop concepts. Source separation in buildings: grey and black water. Reuse options in buildings</p> <p>7. Options for reuse of water and nutrients in buildings: urban farming, green roofs and walls.</p> <p>8. Integrated solutions.</p> <p>Seminary work:</p> <p>Students select a building (a house, hotel, industrial complex) or a group of buildings and propose collection, treatment and reuse of water, nutrients and energy, i.e. a closed-loop concept for water management.</p>

Cilji in kompetence:**Cilji:**

Cilj predmeta je študentom dati dodatna znanja in spretnosti pri reševanju najbolj kompleksnih okoljskih problemov.

Kompetence:

Študent se nauči prepoznavati kdaj je primerno ravnanje z viri po principu zapiranja zank. Pozna koncepte in tehnologije, ki to omogočajo na nivoju stavbe in/ali naselja. Zna ovrednotiti take rešitve v širšem kontekstu.

Objectives and competences:**Goals:**

Introduce students to additional knowledge and skills for solving complex environmental problems.

Competences:

Students will learn to estimate the applicability of closed-loop management of resources in a building and/or cities. They will learn how to design concepts and appropriate technologies for such solutions and be able to estimate impacts of closed-loop concepts in a wider context.

Predvideni študijski rezultati:**Znanje in razumevanje:**

Razumevanje materialnih tokov (voda, hrana, energija) in uporaba konceptov in tehnologij za njihovo optimizacijo.

Prenosljive spretnosti:

Izvajanje projektov za učinkovito rabo virov po principu zapiranja snovnih tokov.

Intended learning outcomes:**Knowledge and understanding:**

Understanding of material (water-food-energy) flows and concepts and technologies for closing the loop.

Skills:

Implementation of projects for closed-loop management of resources.

Metode poučevanja in učenja:

Predavanja in uporaba pridobljenih znanj pri individualnih seminarskih vaj.

Learning and teaching methods:

Lectures and use of knowledge in elaborating seminary work.

Načini ocenjevanja:**Delež/Weight****Assessment:**

Način (pisni izpit, ustno izpraševanje, naloge, projekt):	Delež/Weight	Assessment:
Vaje	30,00 %	Exercises
Seminarska naloga	30,00 %	Project Report
Izpit	40,00 %	Exam
